Roman public baths in Bath - London- 75 A.D.

## WATER CULTURE ANCIENT ORIGINS

Since the dawn of civilisation, **water** has been a source of life for mankind. And with **stone**, thanks to architecture, as civilisations evolved, **man** created organised spaces to benefit from the contact with this precious element.

03.

## WATER CULTURE MODERN PROSPECTIVE

After years of experience with the most diverse building techniques, Indalo has **specialised** in pools lined with **natural stone**, according to tradition, with the added value of a leading-edge installation technology that makes the most of their beauty and performance.

## THE ARCHITECTURE OF WATER

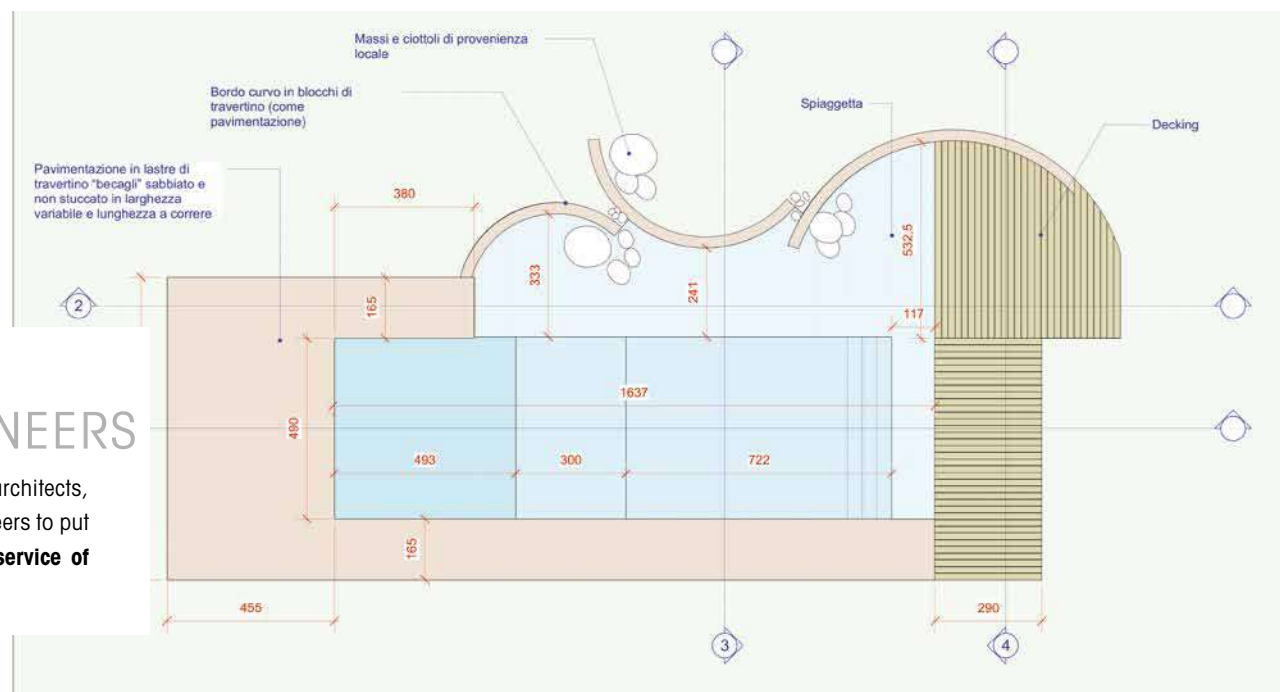

We shape water and natural stone, turning creative ideas into highly aesthetic swimming pools, creating spaces for relaxation and psycho-physical well-being, for an ideal union between man and nature.

## INDALO FOR DESIGN ENGINEERS

We work with world-class architects, landscape designers and engineers to put our technical expertise **at the service of the project.**

## ADVANTAGES

Our pools are never run-of-the-mill: they are specifically created to blend in with the setting and meet the preferences of the end client.

A careful and thought-out selection of the best construction and maintenance solutions we have tested over the years.

Preliminary tests, direct site surveys, cost estimate.

Drawings, projects, 3D renderings and detailed tables that include the engineering components.

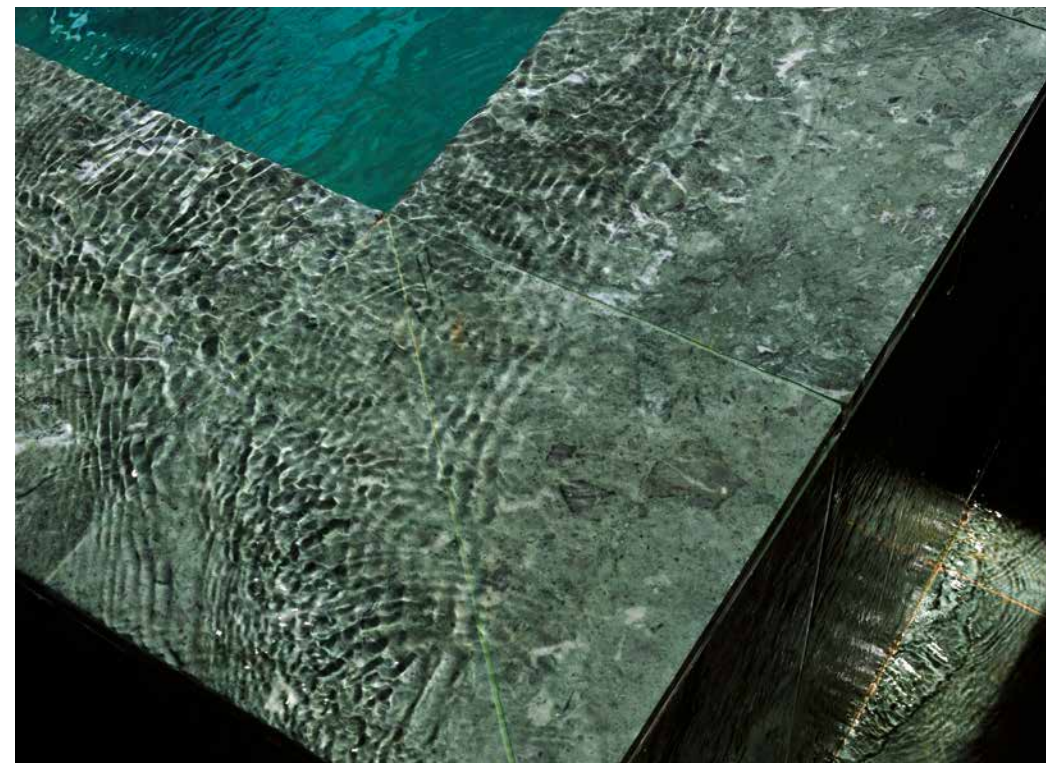

In nature

## WE INVEST IN ECOLOGY

In natural ecosystems, water has its own equilibrium mechanisms to achieve purity, transparency and the ideal conditions for life. We have been inspired by this principle to select or create specific water treatment technologies **alternative to chemical ones**, with **a low environmental impact** and **high energy savings**, the best-suited for man and the materials used.

Indalo

08.

09.

## HOW WE CARRY OUT THE PROJECT

We have a team of qualified, efficient and thorough technicians who will oversee **every stage of the project**: from initial design to building and installation works, up to commissioning.

## DETAILS

We pay extreme attention to defining all the construction details and finishes, which are always customised, to guarantee a beautiful and accurate finished product.

## MAINTENANCE

Working with Indalo means peace of mind over time, as we provide constant **after-sales** support, also with **remote control** systems over all the operating cycles of the pool.

## PROFESSIONAL ADVICE

We provide professional advice to analyse existing pools with malfunctions. After the necessary site survey, **we fix the system** as quickly as possible to solve the issue.

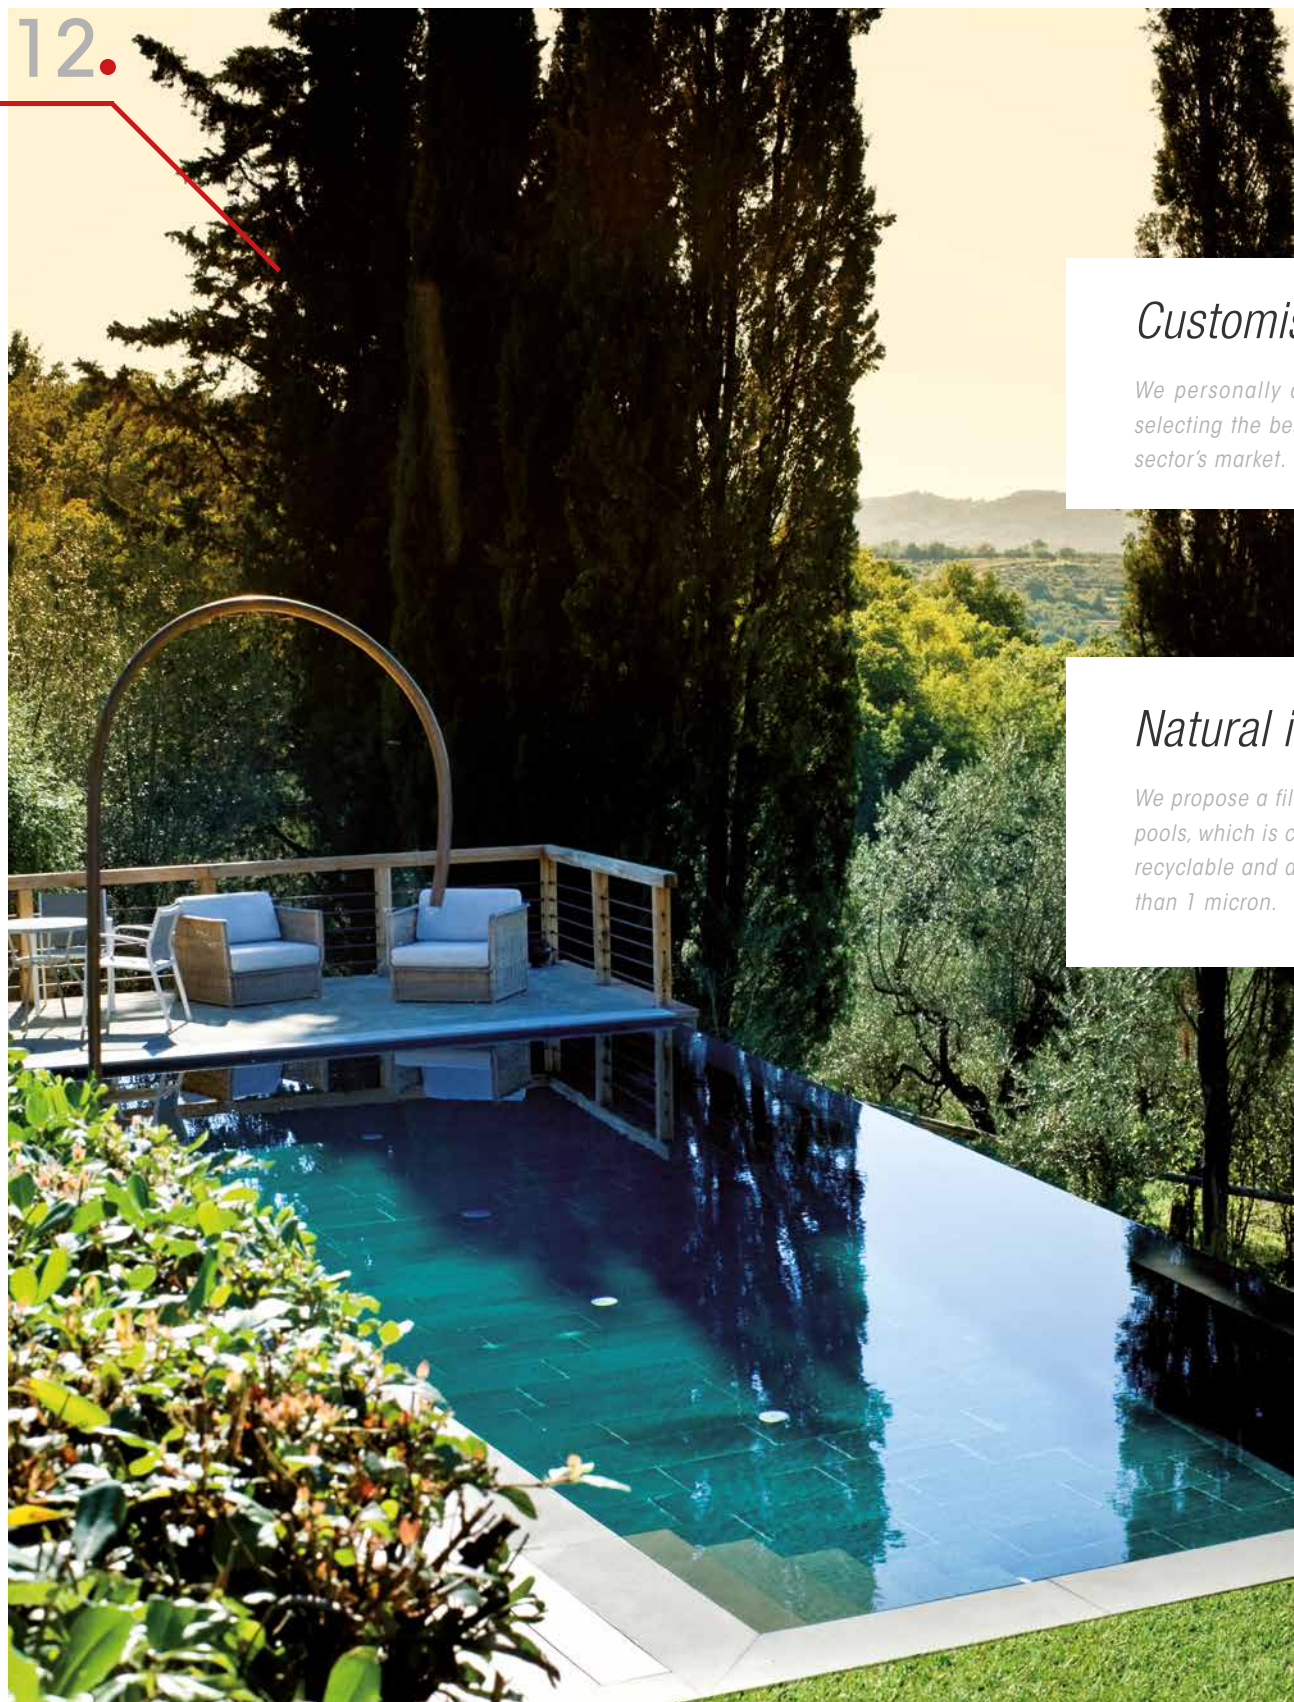

## ITALIAN CRAFTSMANSHIP

Indalo pools are the result of masterly craftsmanship, because we use materials and technical instruments based on our experience, rather than mechanically, which makes every project unique.

12.

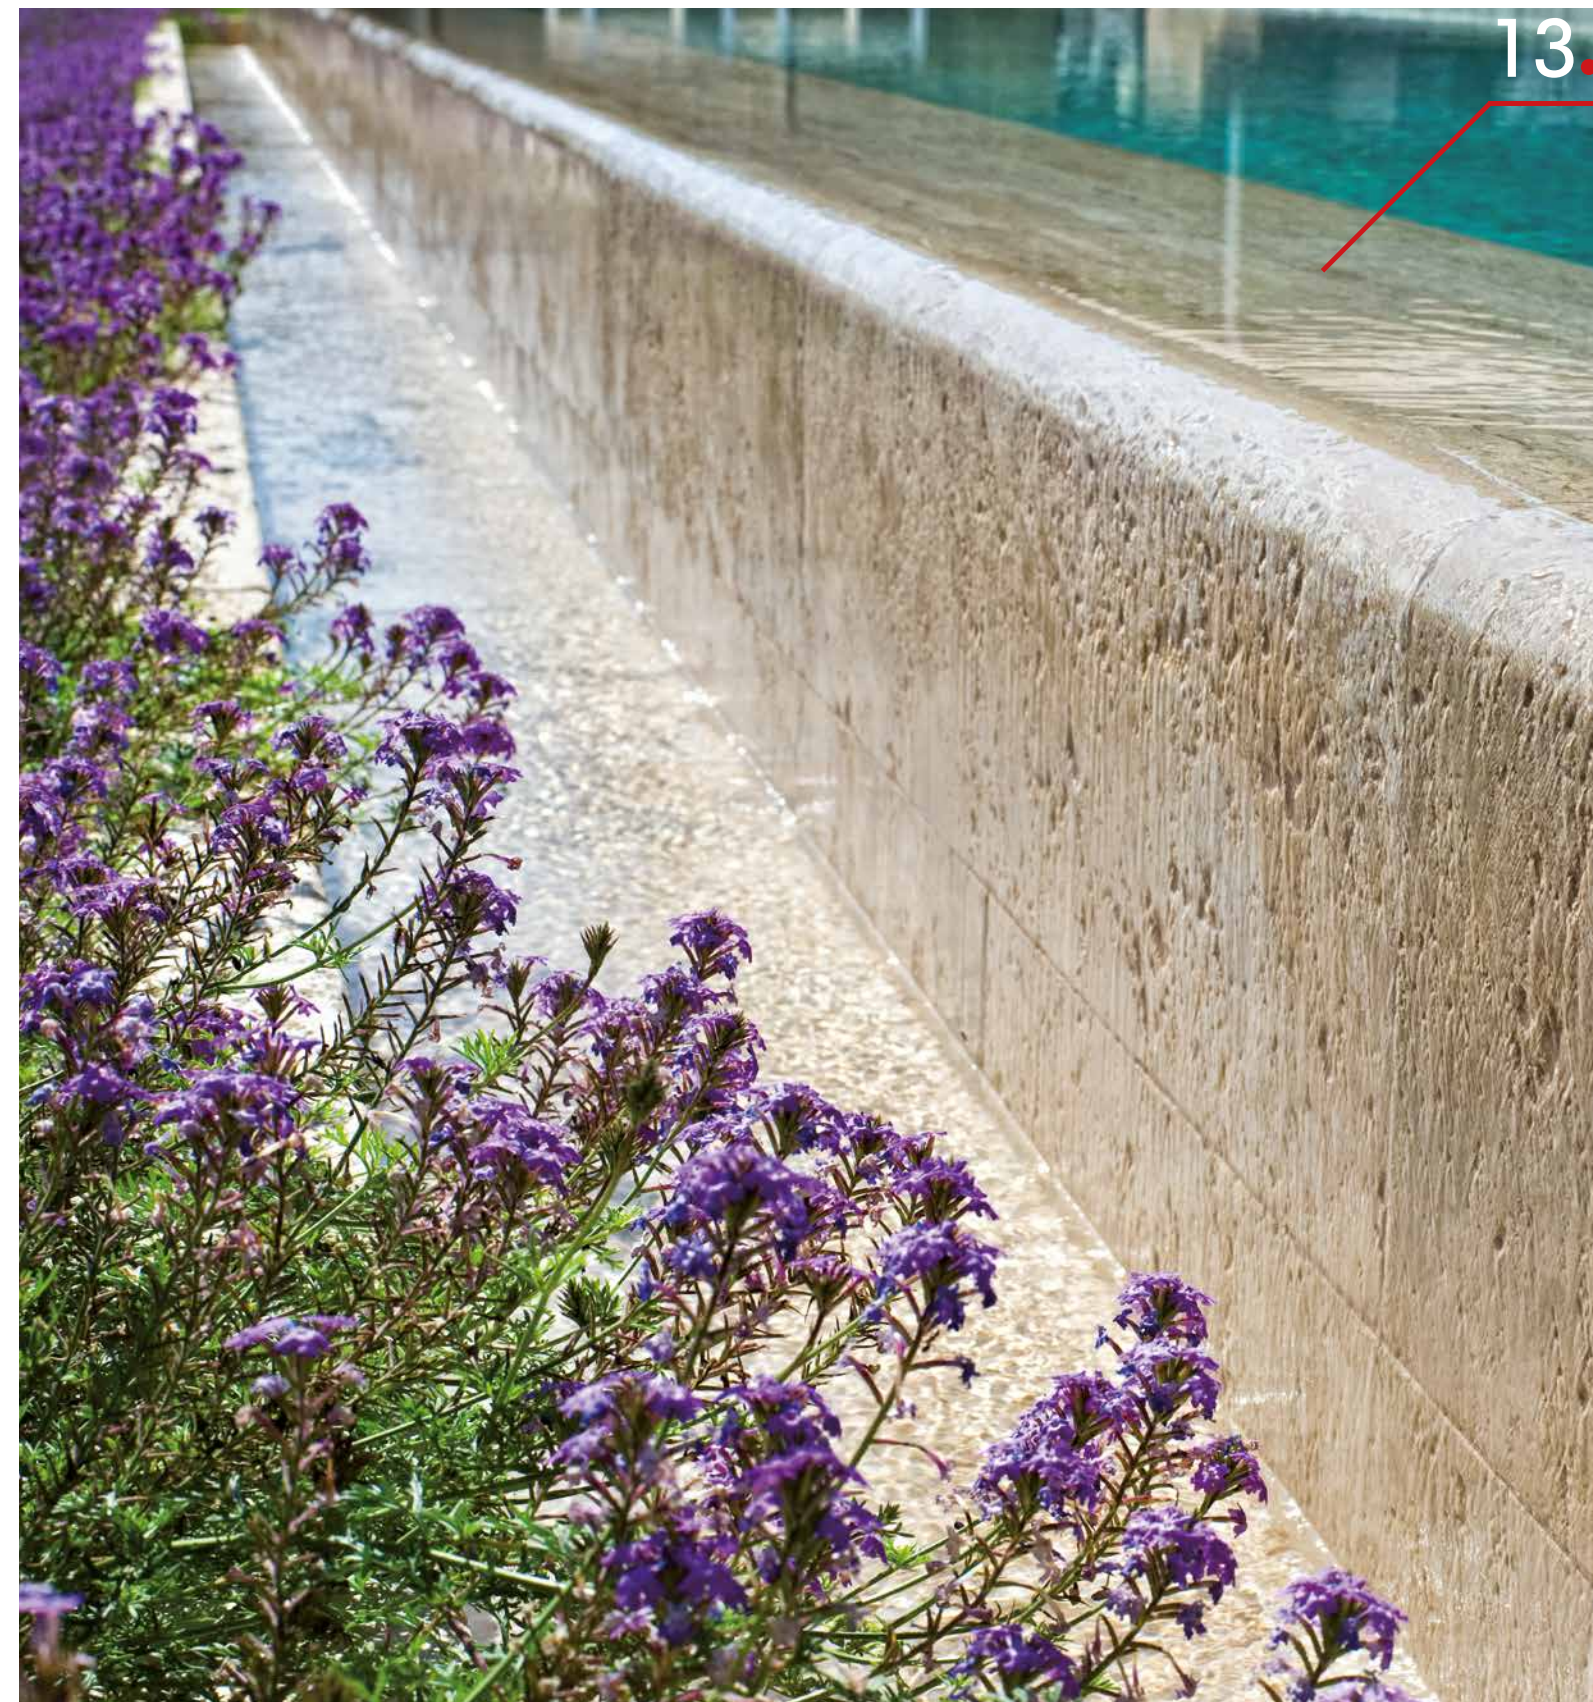

### *Customised technology*

*We personally design filtering systems by selecting the best products available on the sector's market.*

### *Natural is best*

*We propose a filtering bed for our swimming pools, which is completely natural and 100% recyclable and able to purify particles smaller than 1 micron.*

13.

14.

15.

### *The goal of pure water*

*Water sanitisation, which can be carried out using various systems, considers salt as one of the most natural, economic and healthy options for man since it is odourless, colourless and not aggressive on the skin. Valid alternatives include UV, ozone and oxygen to be selected according to the customer's requirements.*

20.

21.

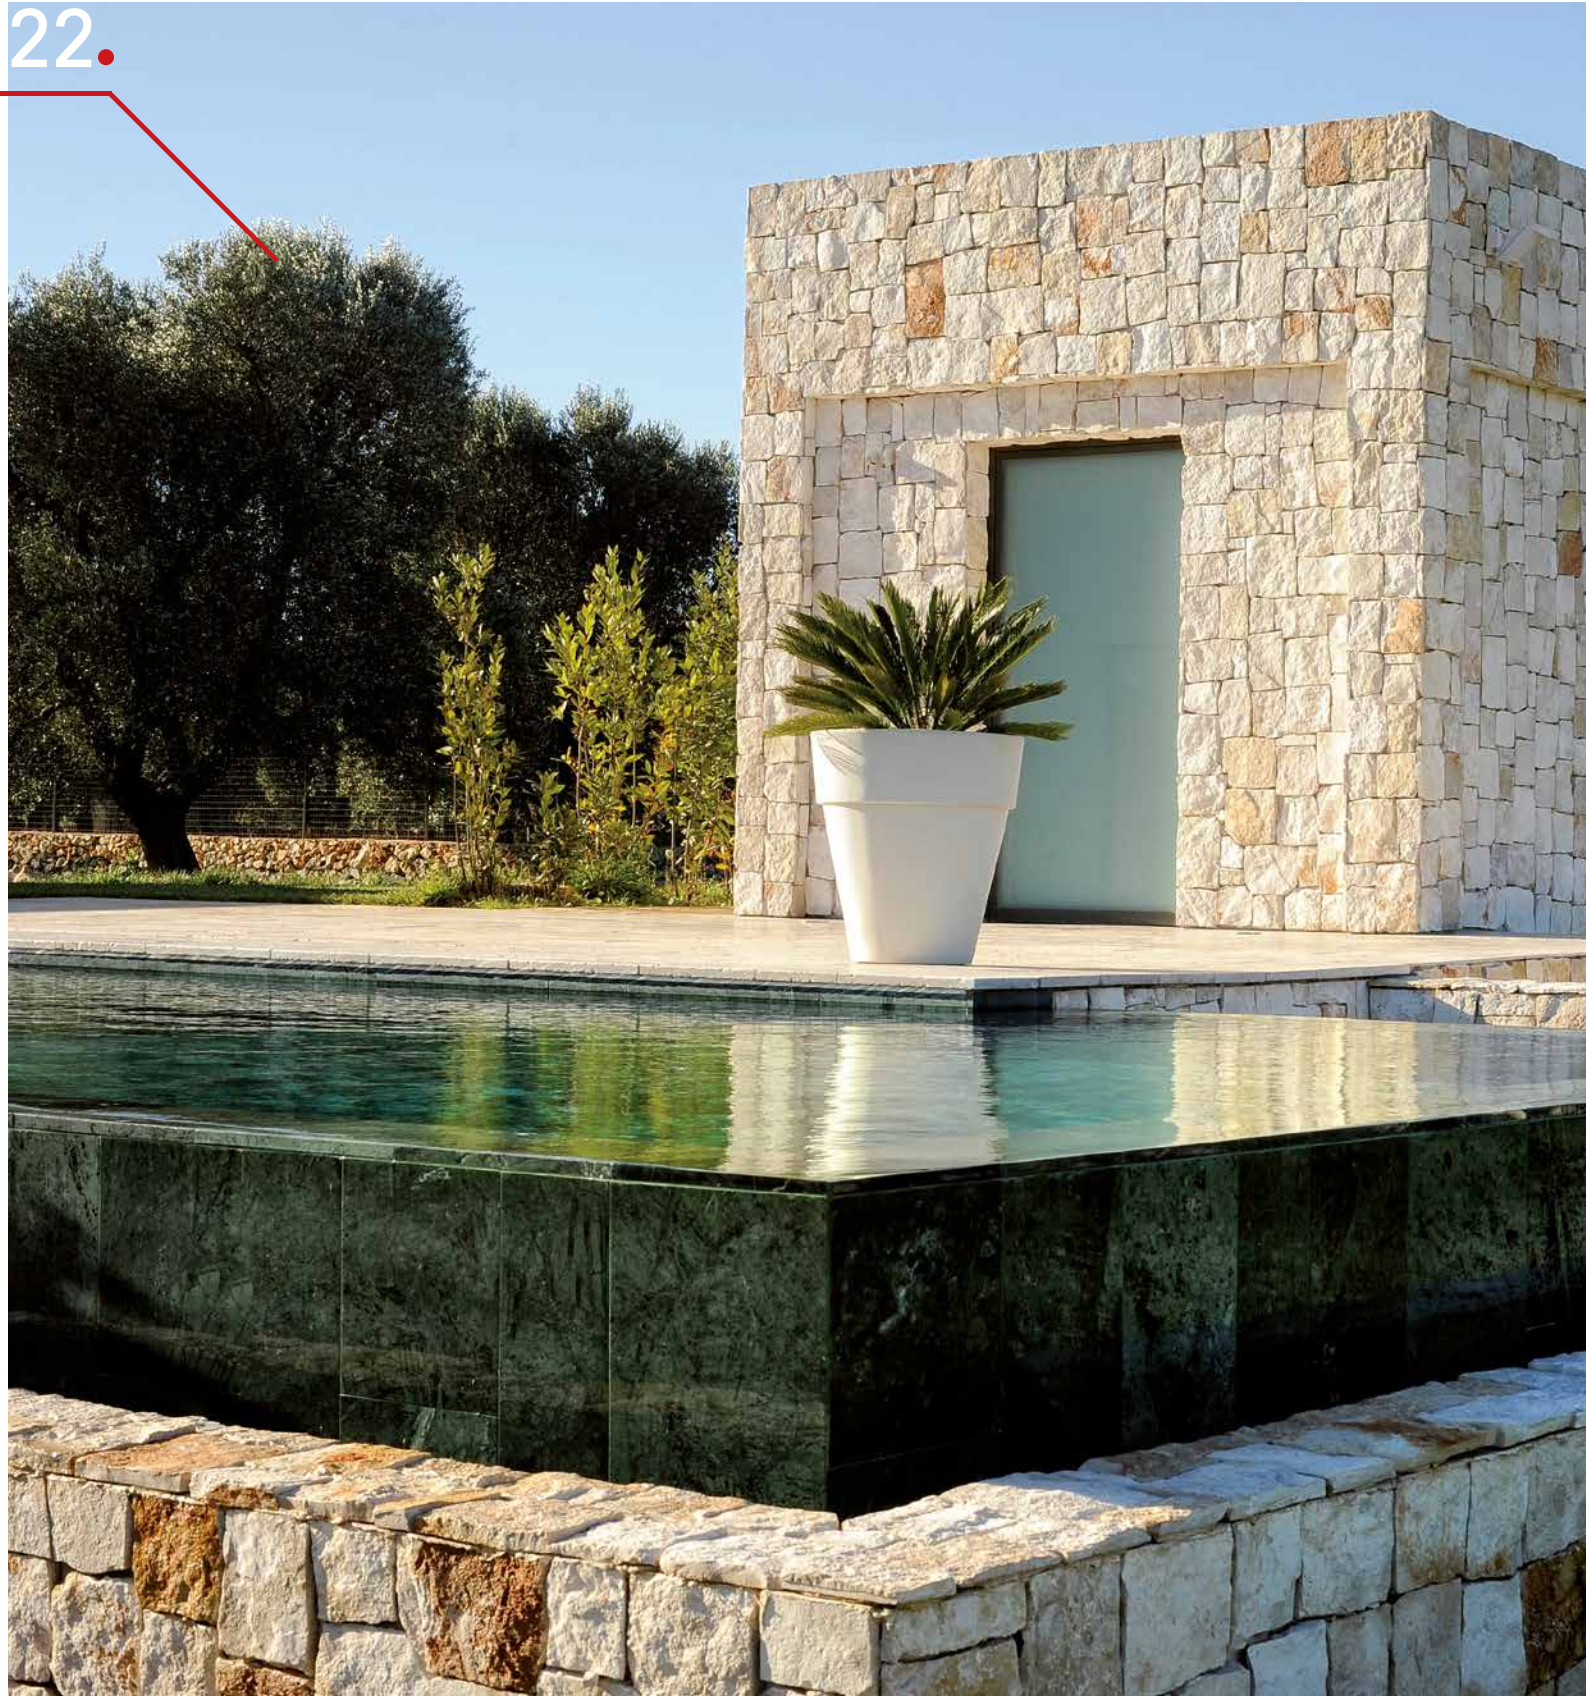

### *Night visual impact*

*As a result of lighting, the swimming pool can be very effective at night. We pick low-consumption floodlights, with high-performance technical and chromatic specifications, such as LEDs or optical fibre, that can be also controlled by home automation systems.*

22.

23.

### *Long-lasting coatings*

*We guarantee a long life to your swimming pool: our specialised chemical technicians put forward the most suitable water sanitisation system to prevent the natural coating materials of the pool from changing colour and being subject to erosion over time.*

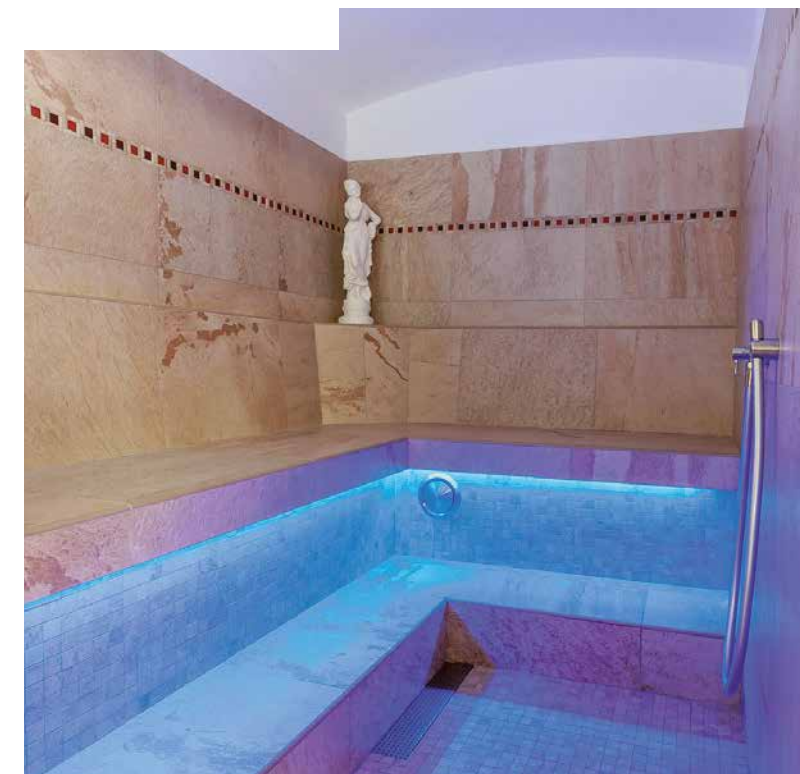

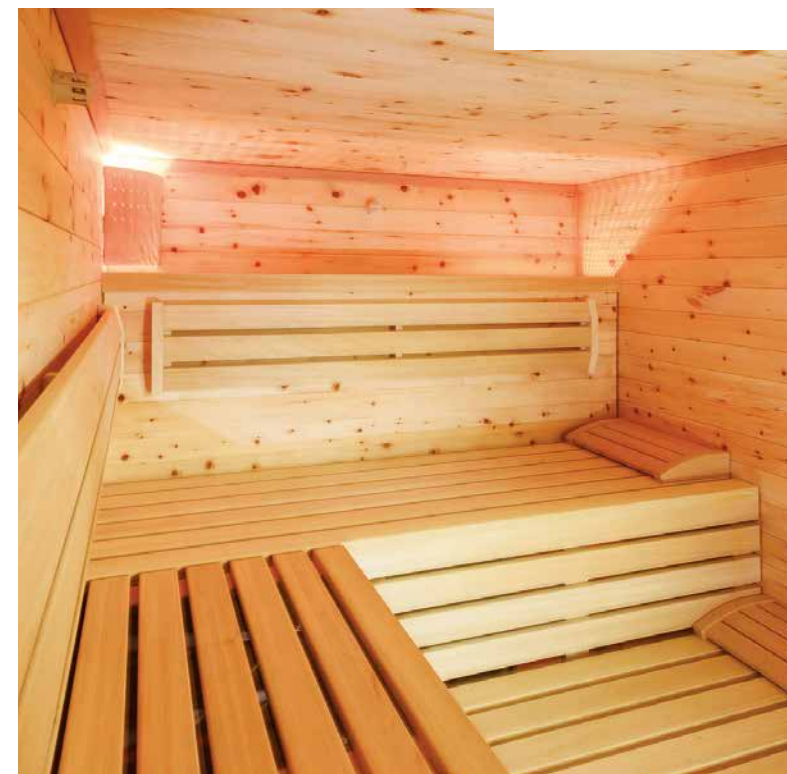

## *The virtues of heat and steam*

*Indalo completes its offer with the design of saunas and Turkish baths. It also offers consultancy services to choose which solution is more suitable for you between the two different ways of relaxing and purifying the body - the strong, dry heat of the sauna or the high moisture of the Turkish bath steam.*

26.

27.

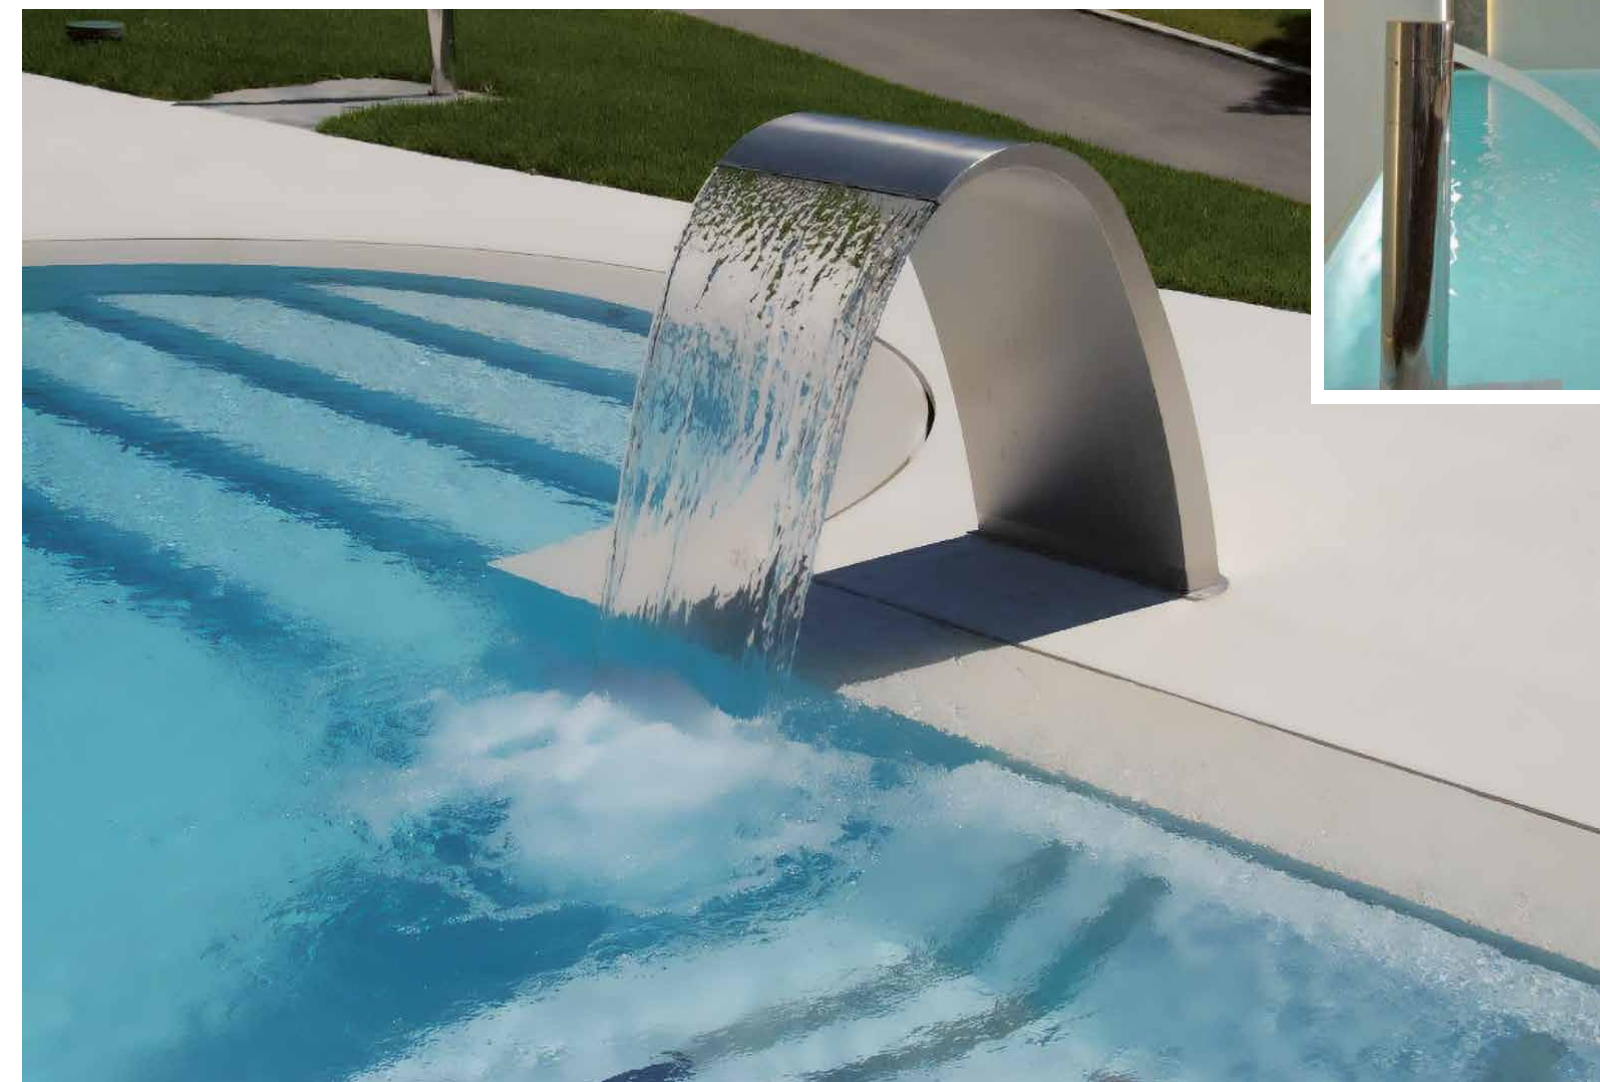

28.

29.

### *Compact size, maximum performance*

*We constantly search for products that offer the best performance without impacting the location's design, like the innovative concealed water jets in the floor.*

32.

## Swimming in a small space

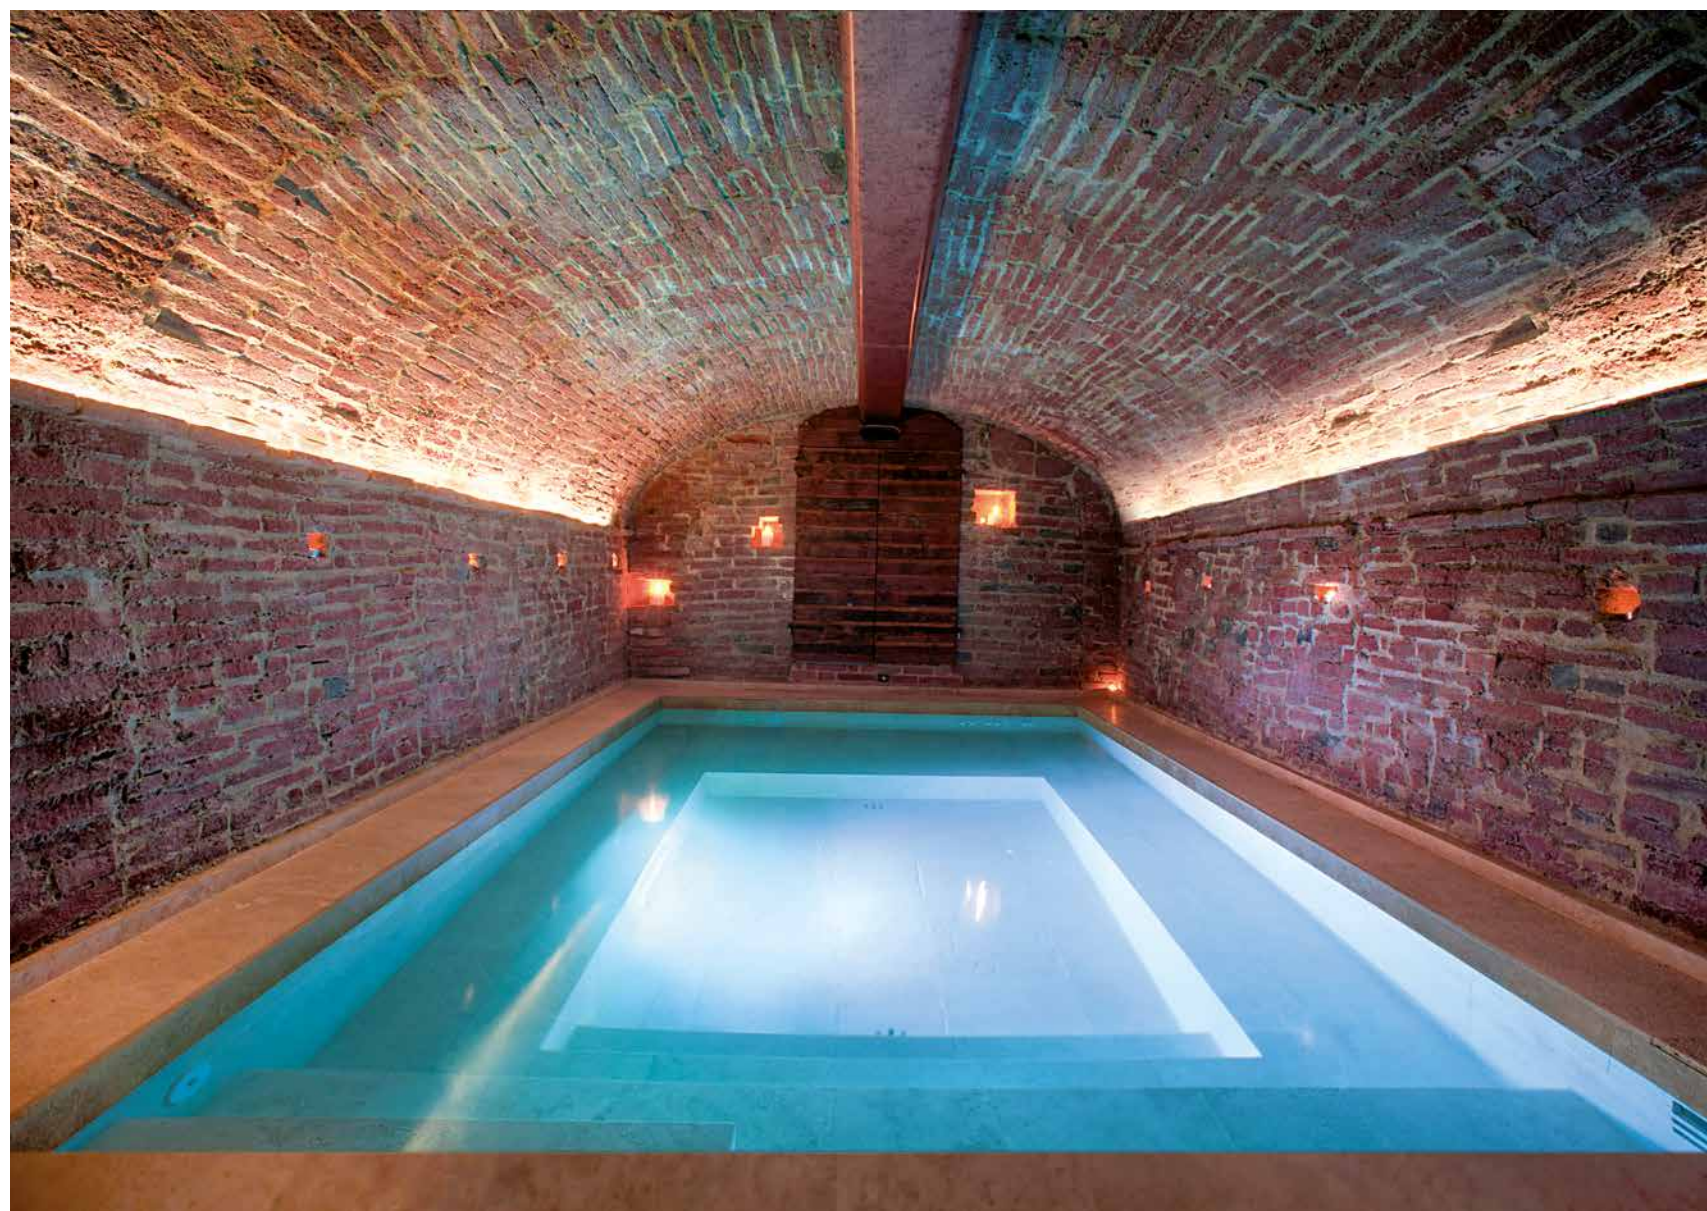

*The consultancy services offered by Indalo provide the option to compensate for any structural limitations: by exploiting the thrust of a powerful water pump with innovative optical reading ignition, even a small pool can offer infinite swimming.*

33.

## Colour and relax

*The polychromatic lighting of the swimming pool creates a strong visual impact and an emotional atmosphere, in perfect harmony with the state of mind of those who immerse themselves for total psycho-physical well-being.*

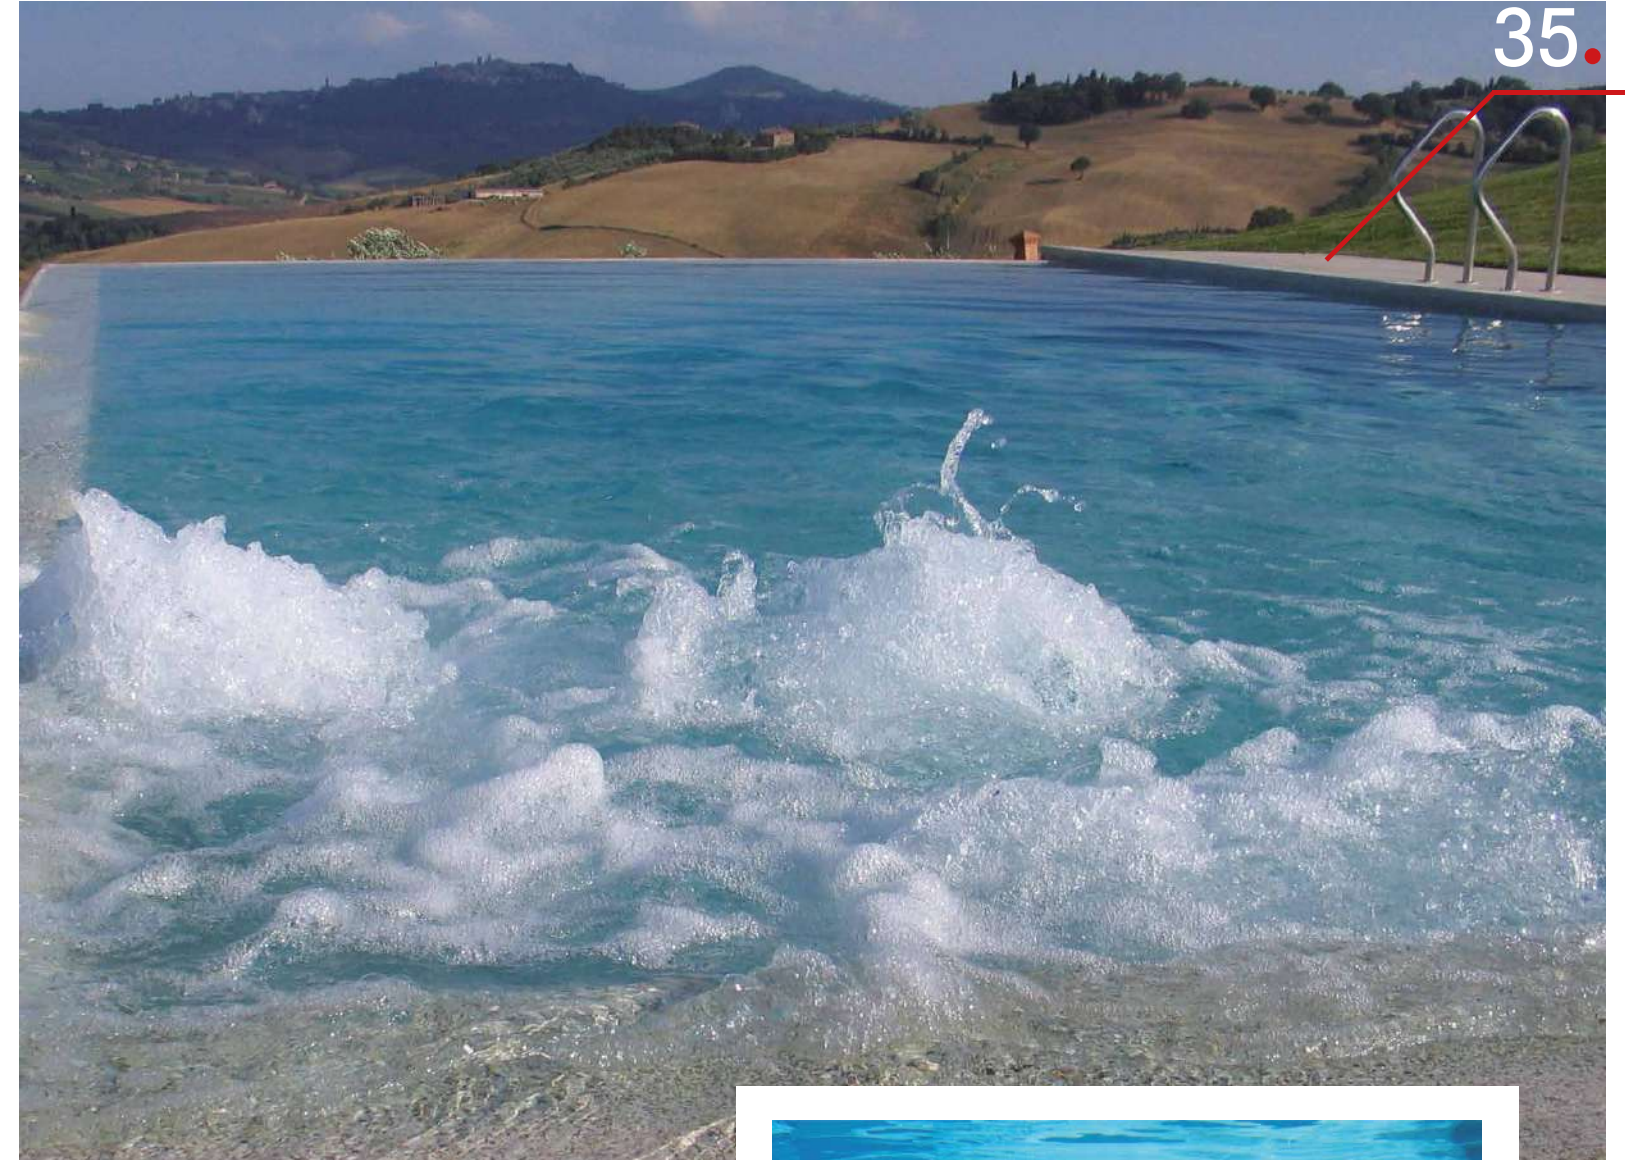

34.

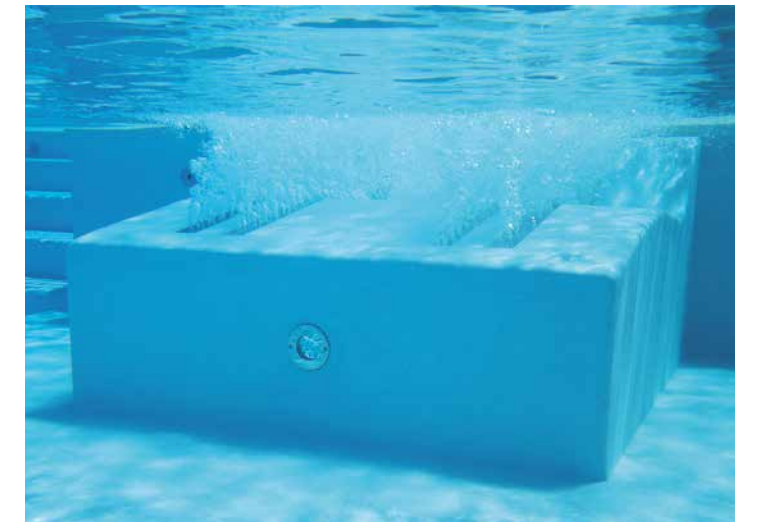

35.

### *Hydro well-being*

*Hydro massage can wrap the whole body or be used for targeted massages. Our choice is made from the desire of the end customer: air, air and water, on a base slab, on benches, wall-mounted.*

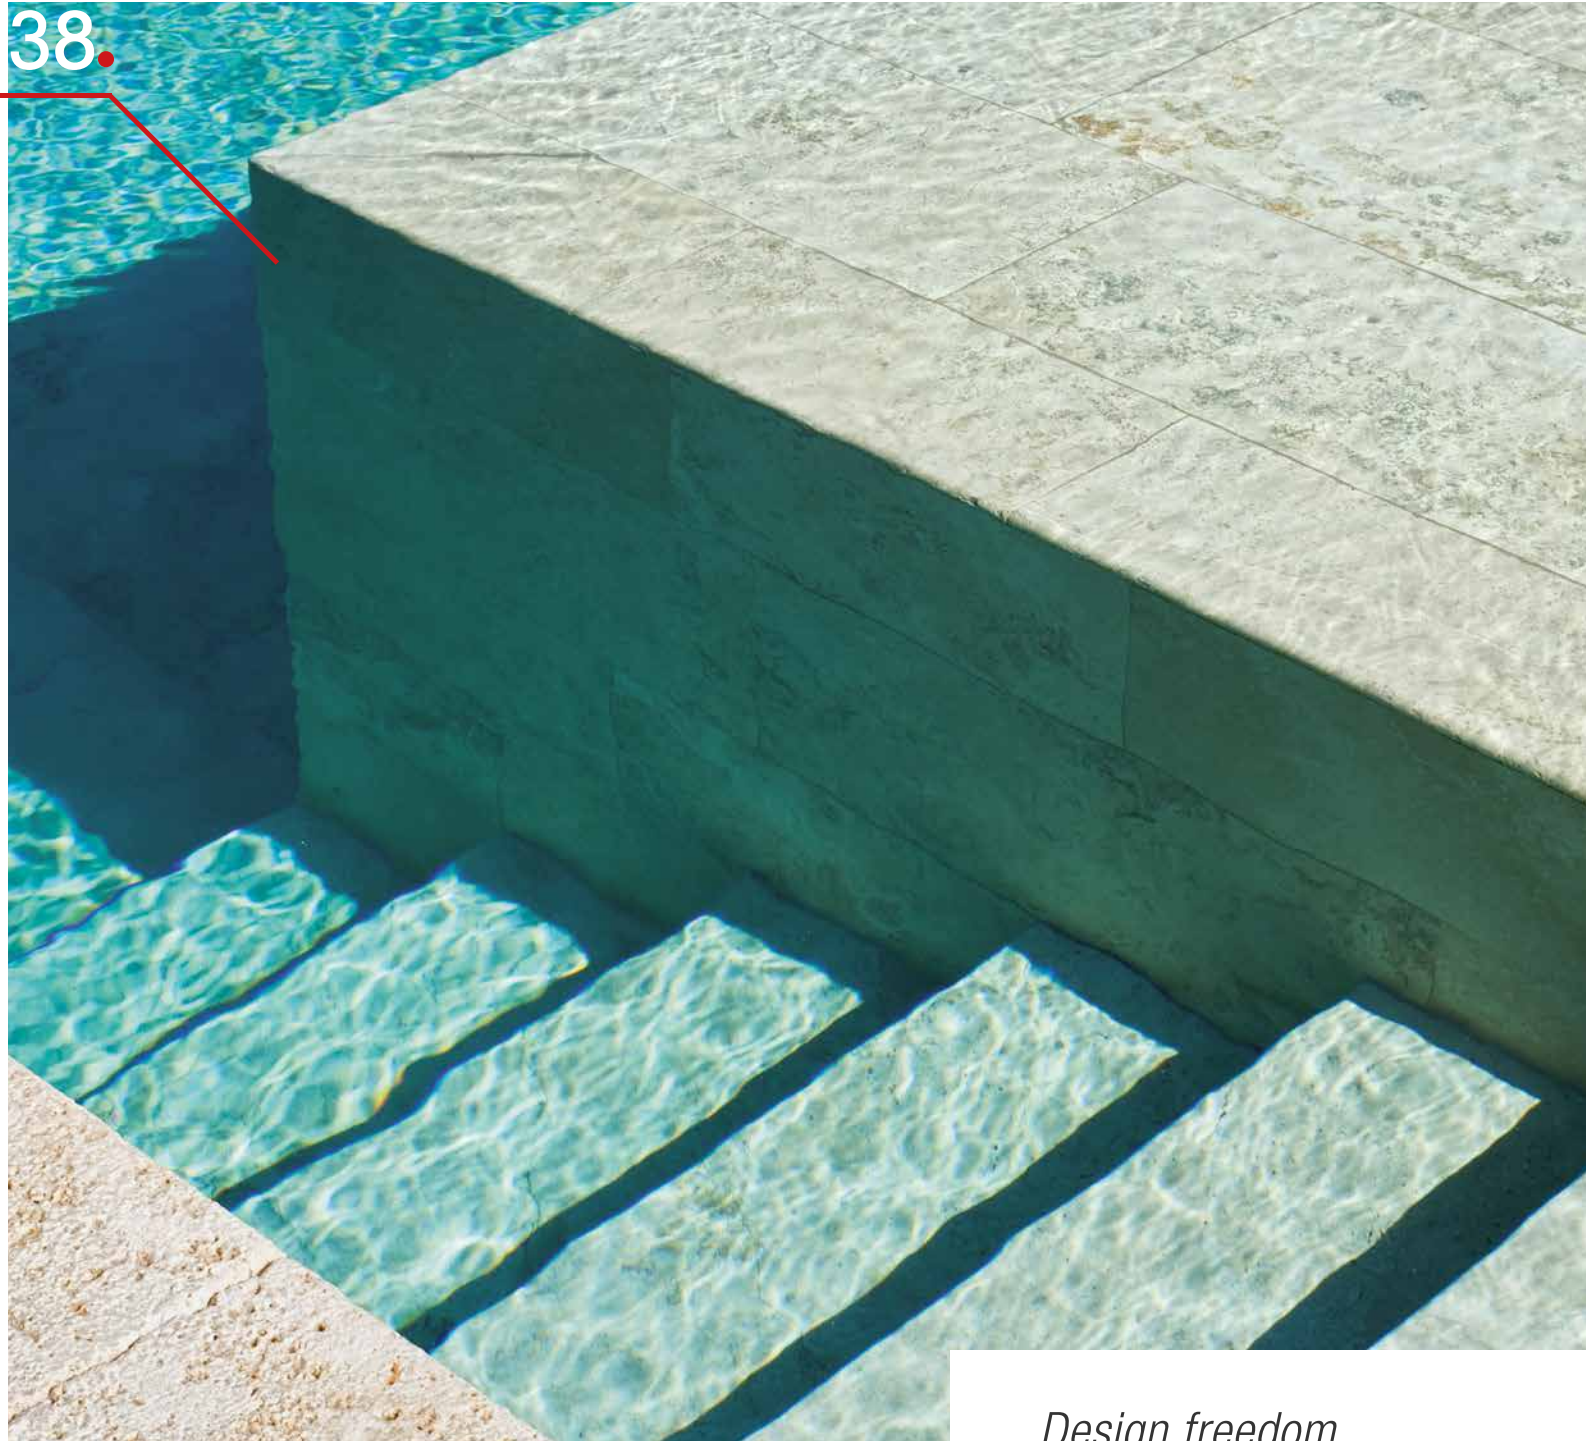

36.

37.

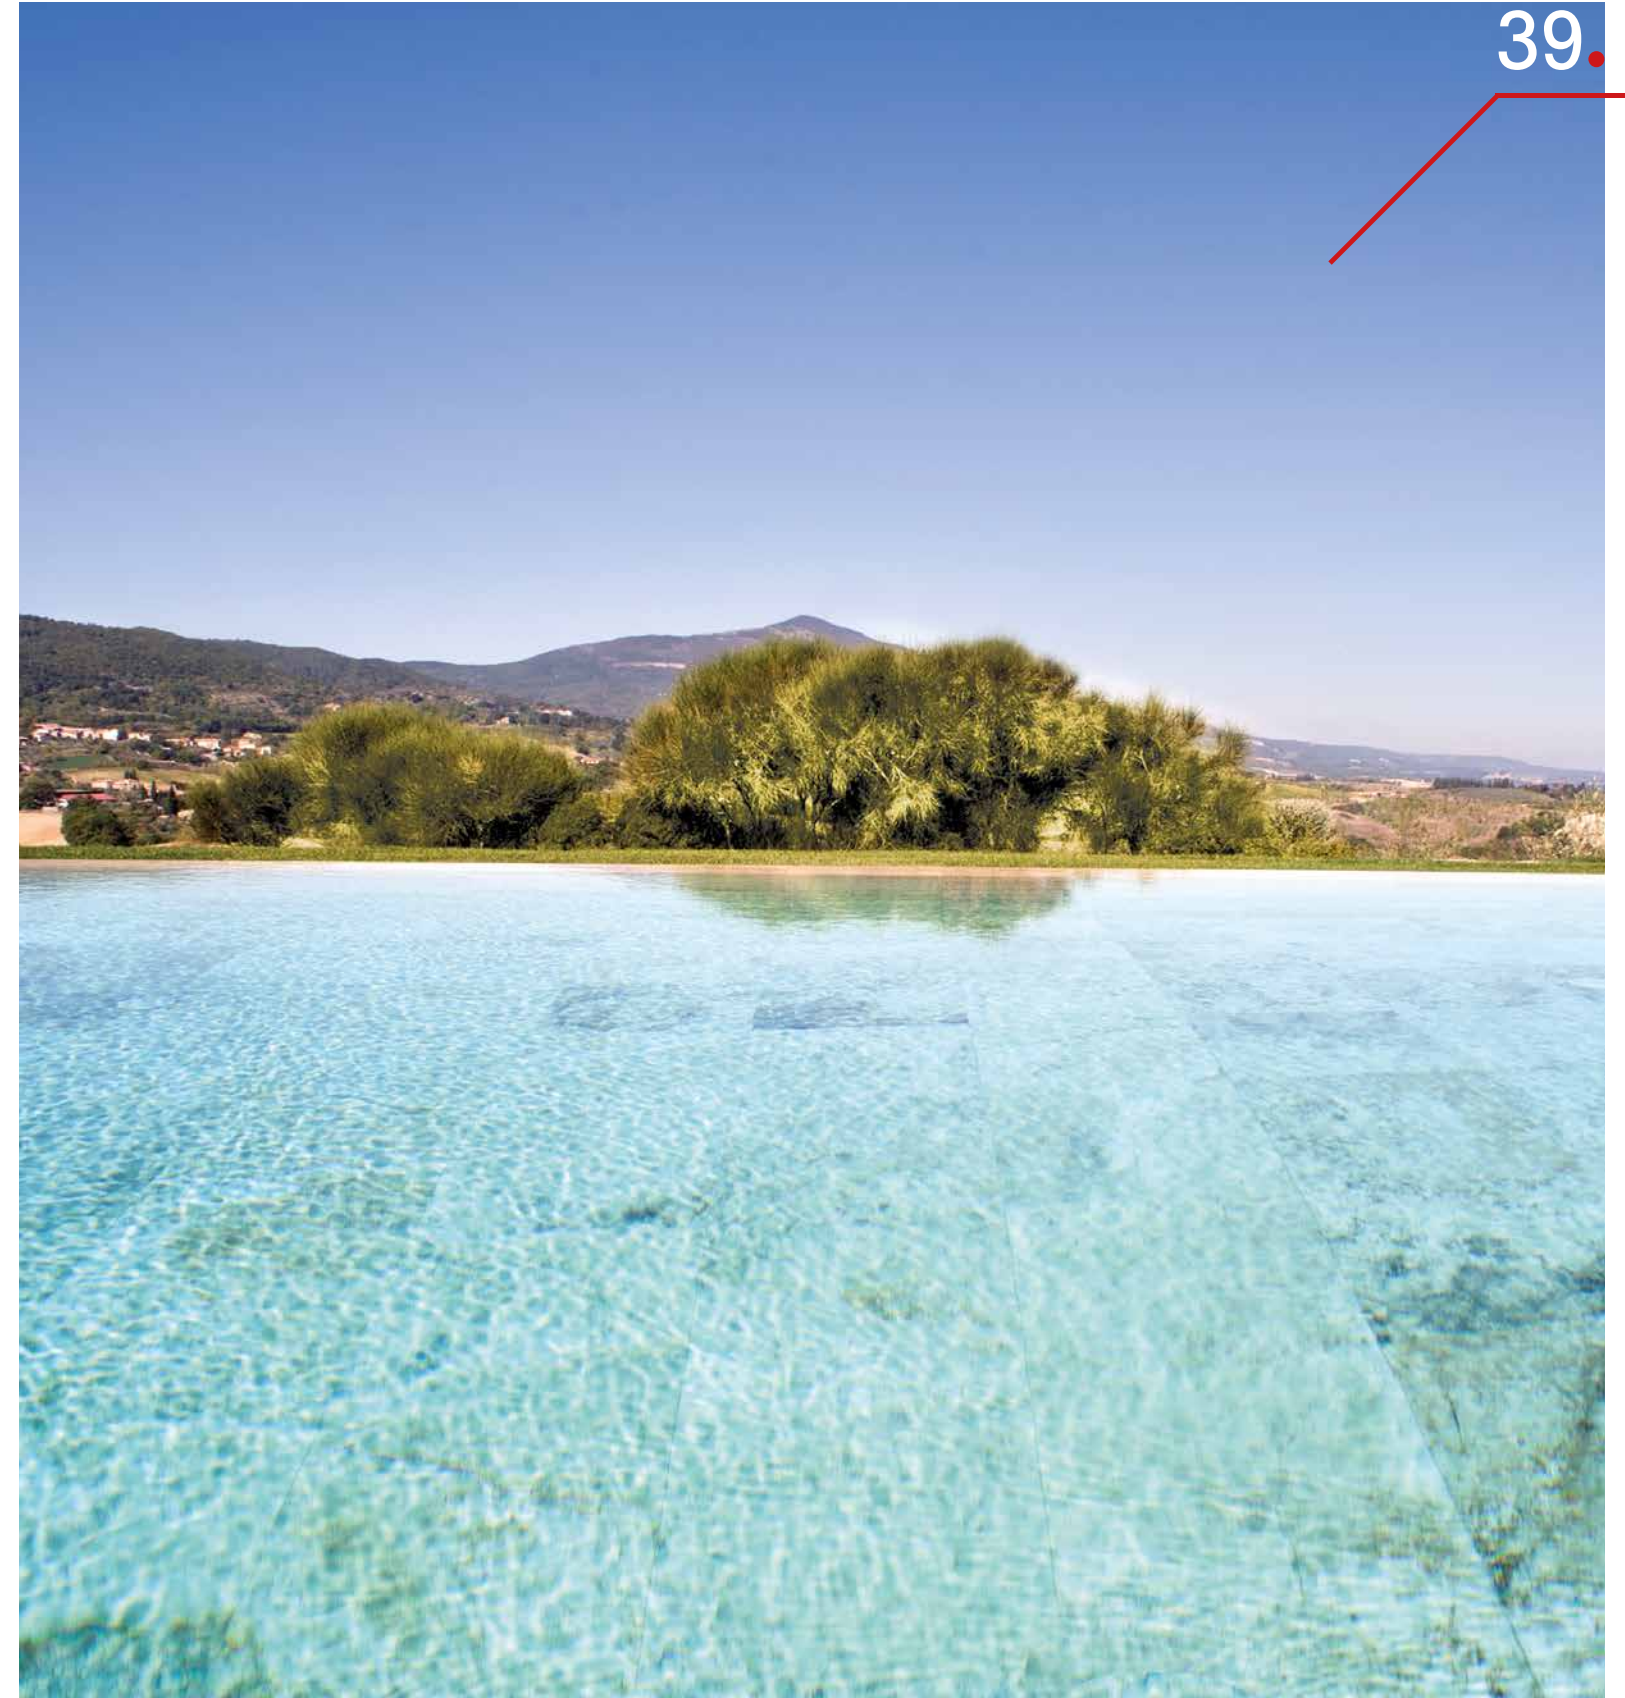

38.

### *Design freedom*

*Together with the design specialist, we interpret the customer's desires: a sector with just 10 cm of water above the technical room. In addition to creating a pleasant chromatic effect, it offers a relaxing shoreline area.*

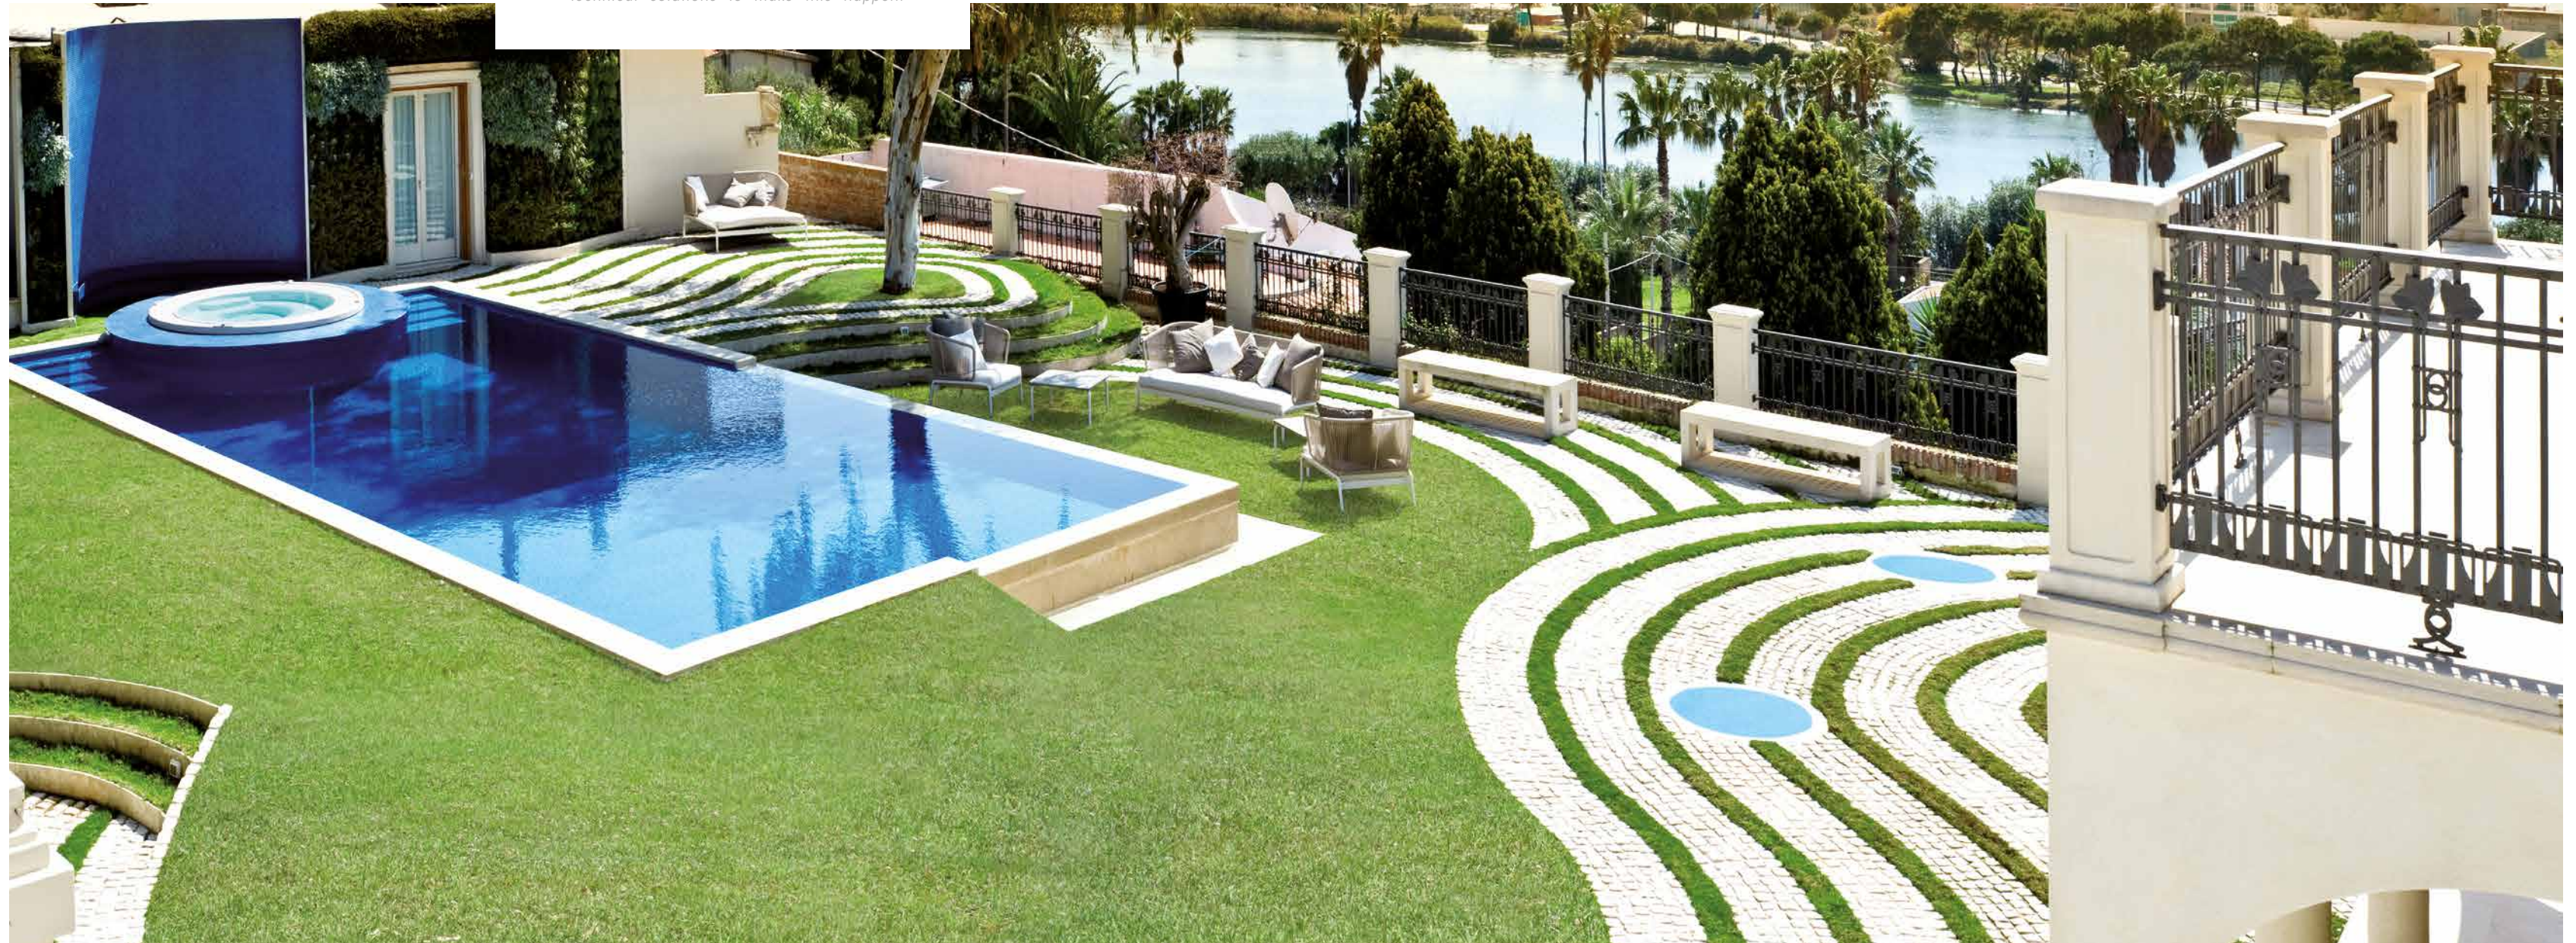

39.

## *Indalo and the landscape designer*

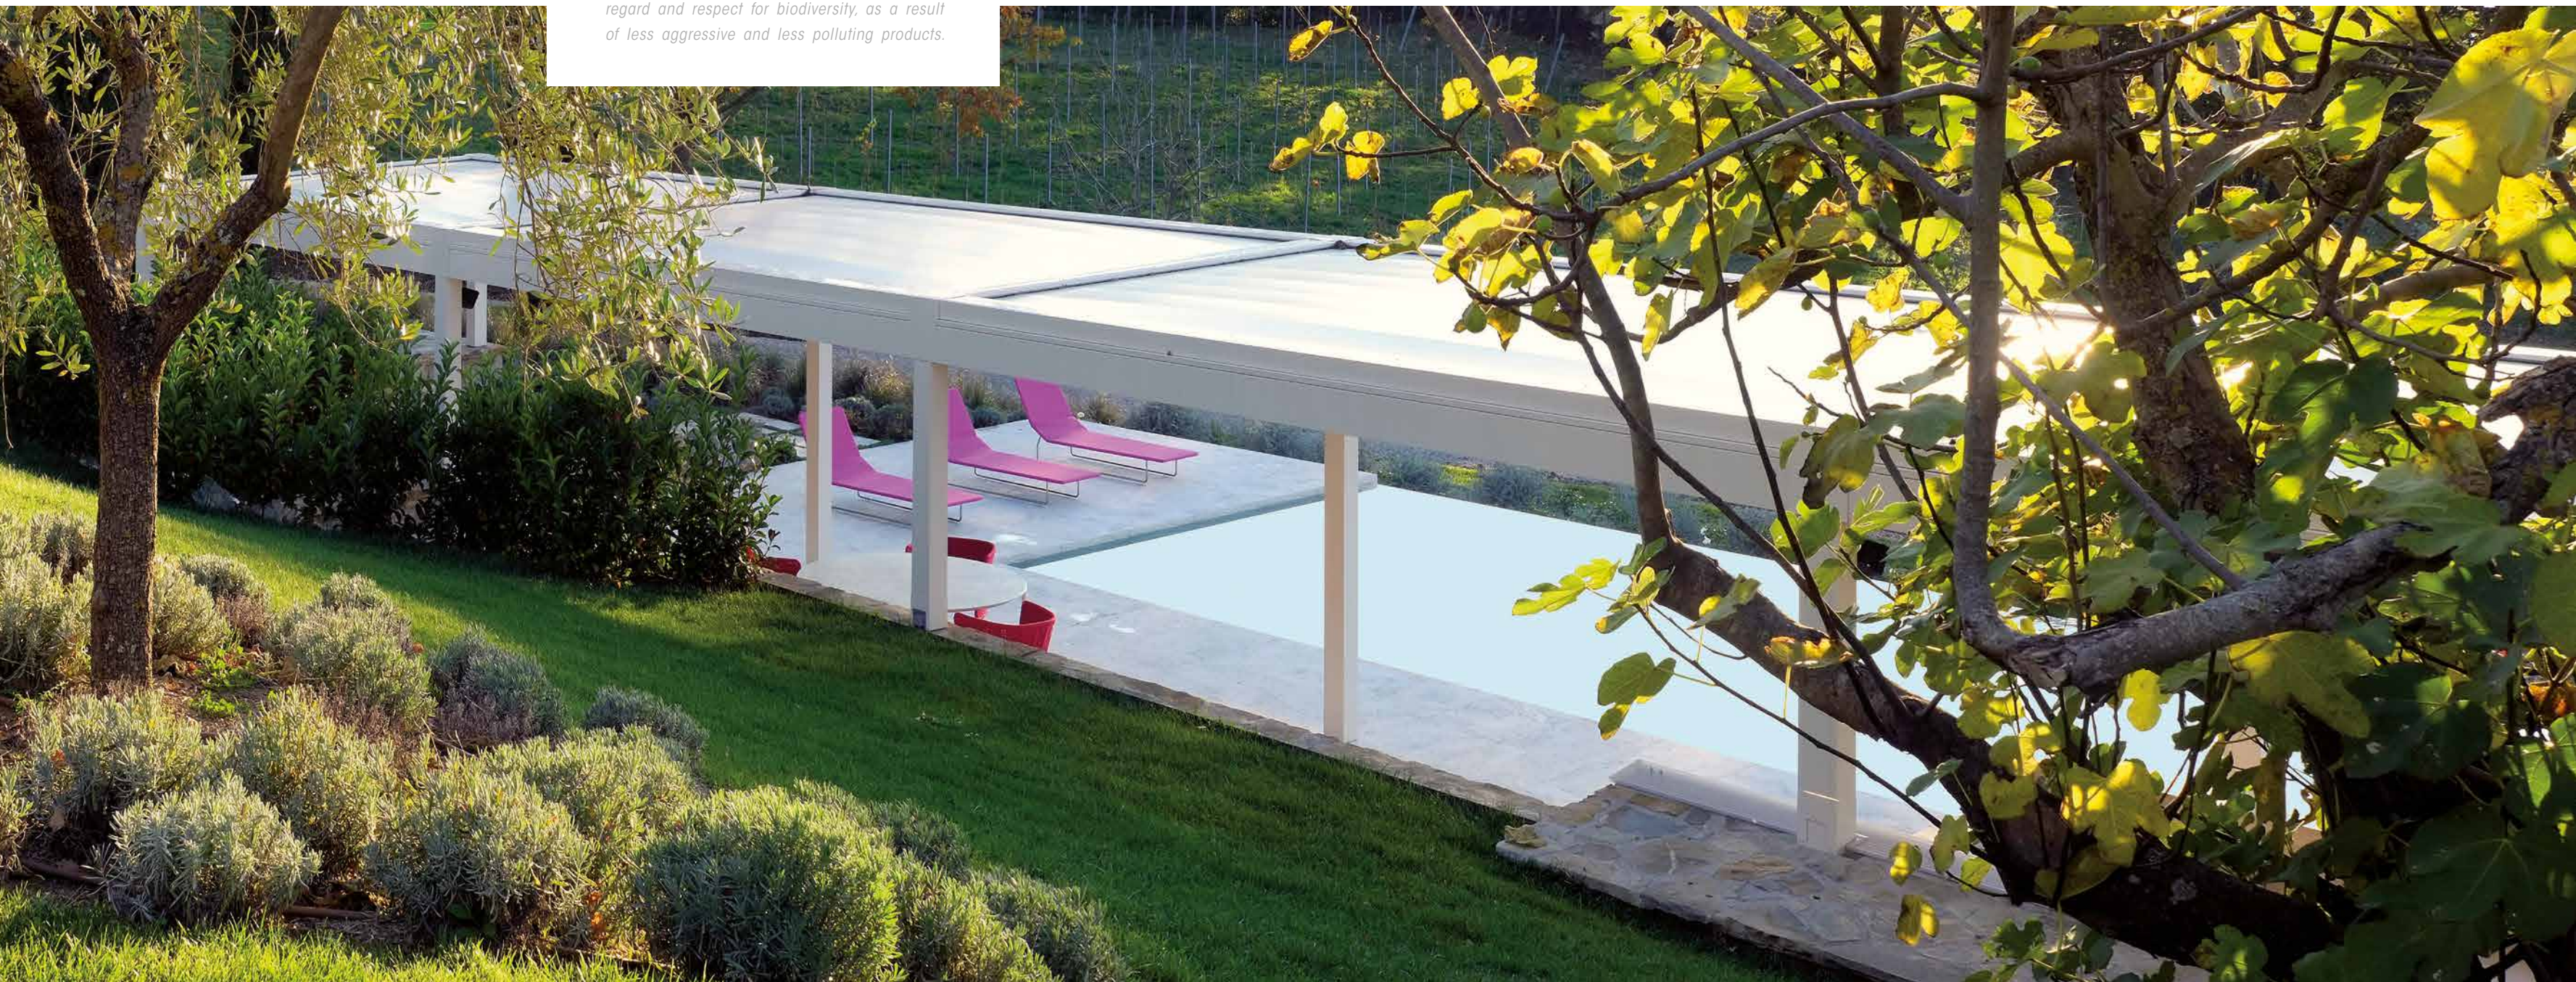

*The landscape designer is free to create a union between the water space and the surrounding area, and Indalo will find the technical solutions to make this happen.*

### *Quality and safety*

*Our prerogative is to work with products that guarantee high quality, high performance, high regard and respect for biodiversity, as a result of less aggressive and less polluting products.*

44.

45.

### *Natural colours*

*Stone offers various shades, but they are always natural, to obtain a mirror of water perfectly blending into the context.*

*For example, a travertine coating creates green reflexes that harmonise well with elegant gardens.*

48.

49.

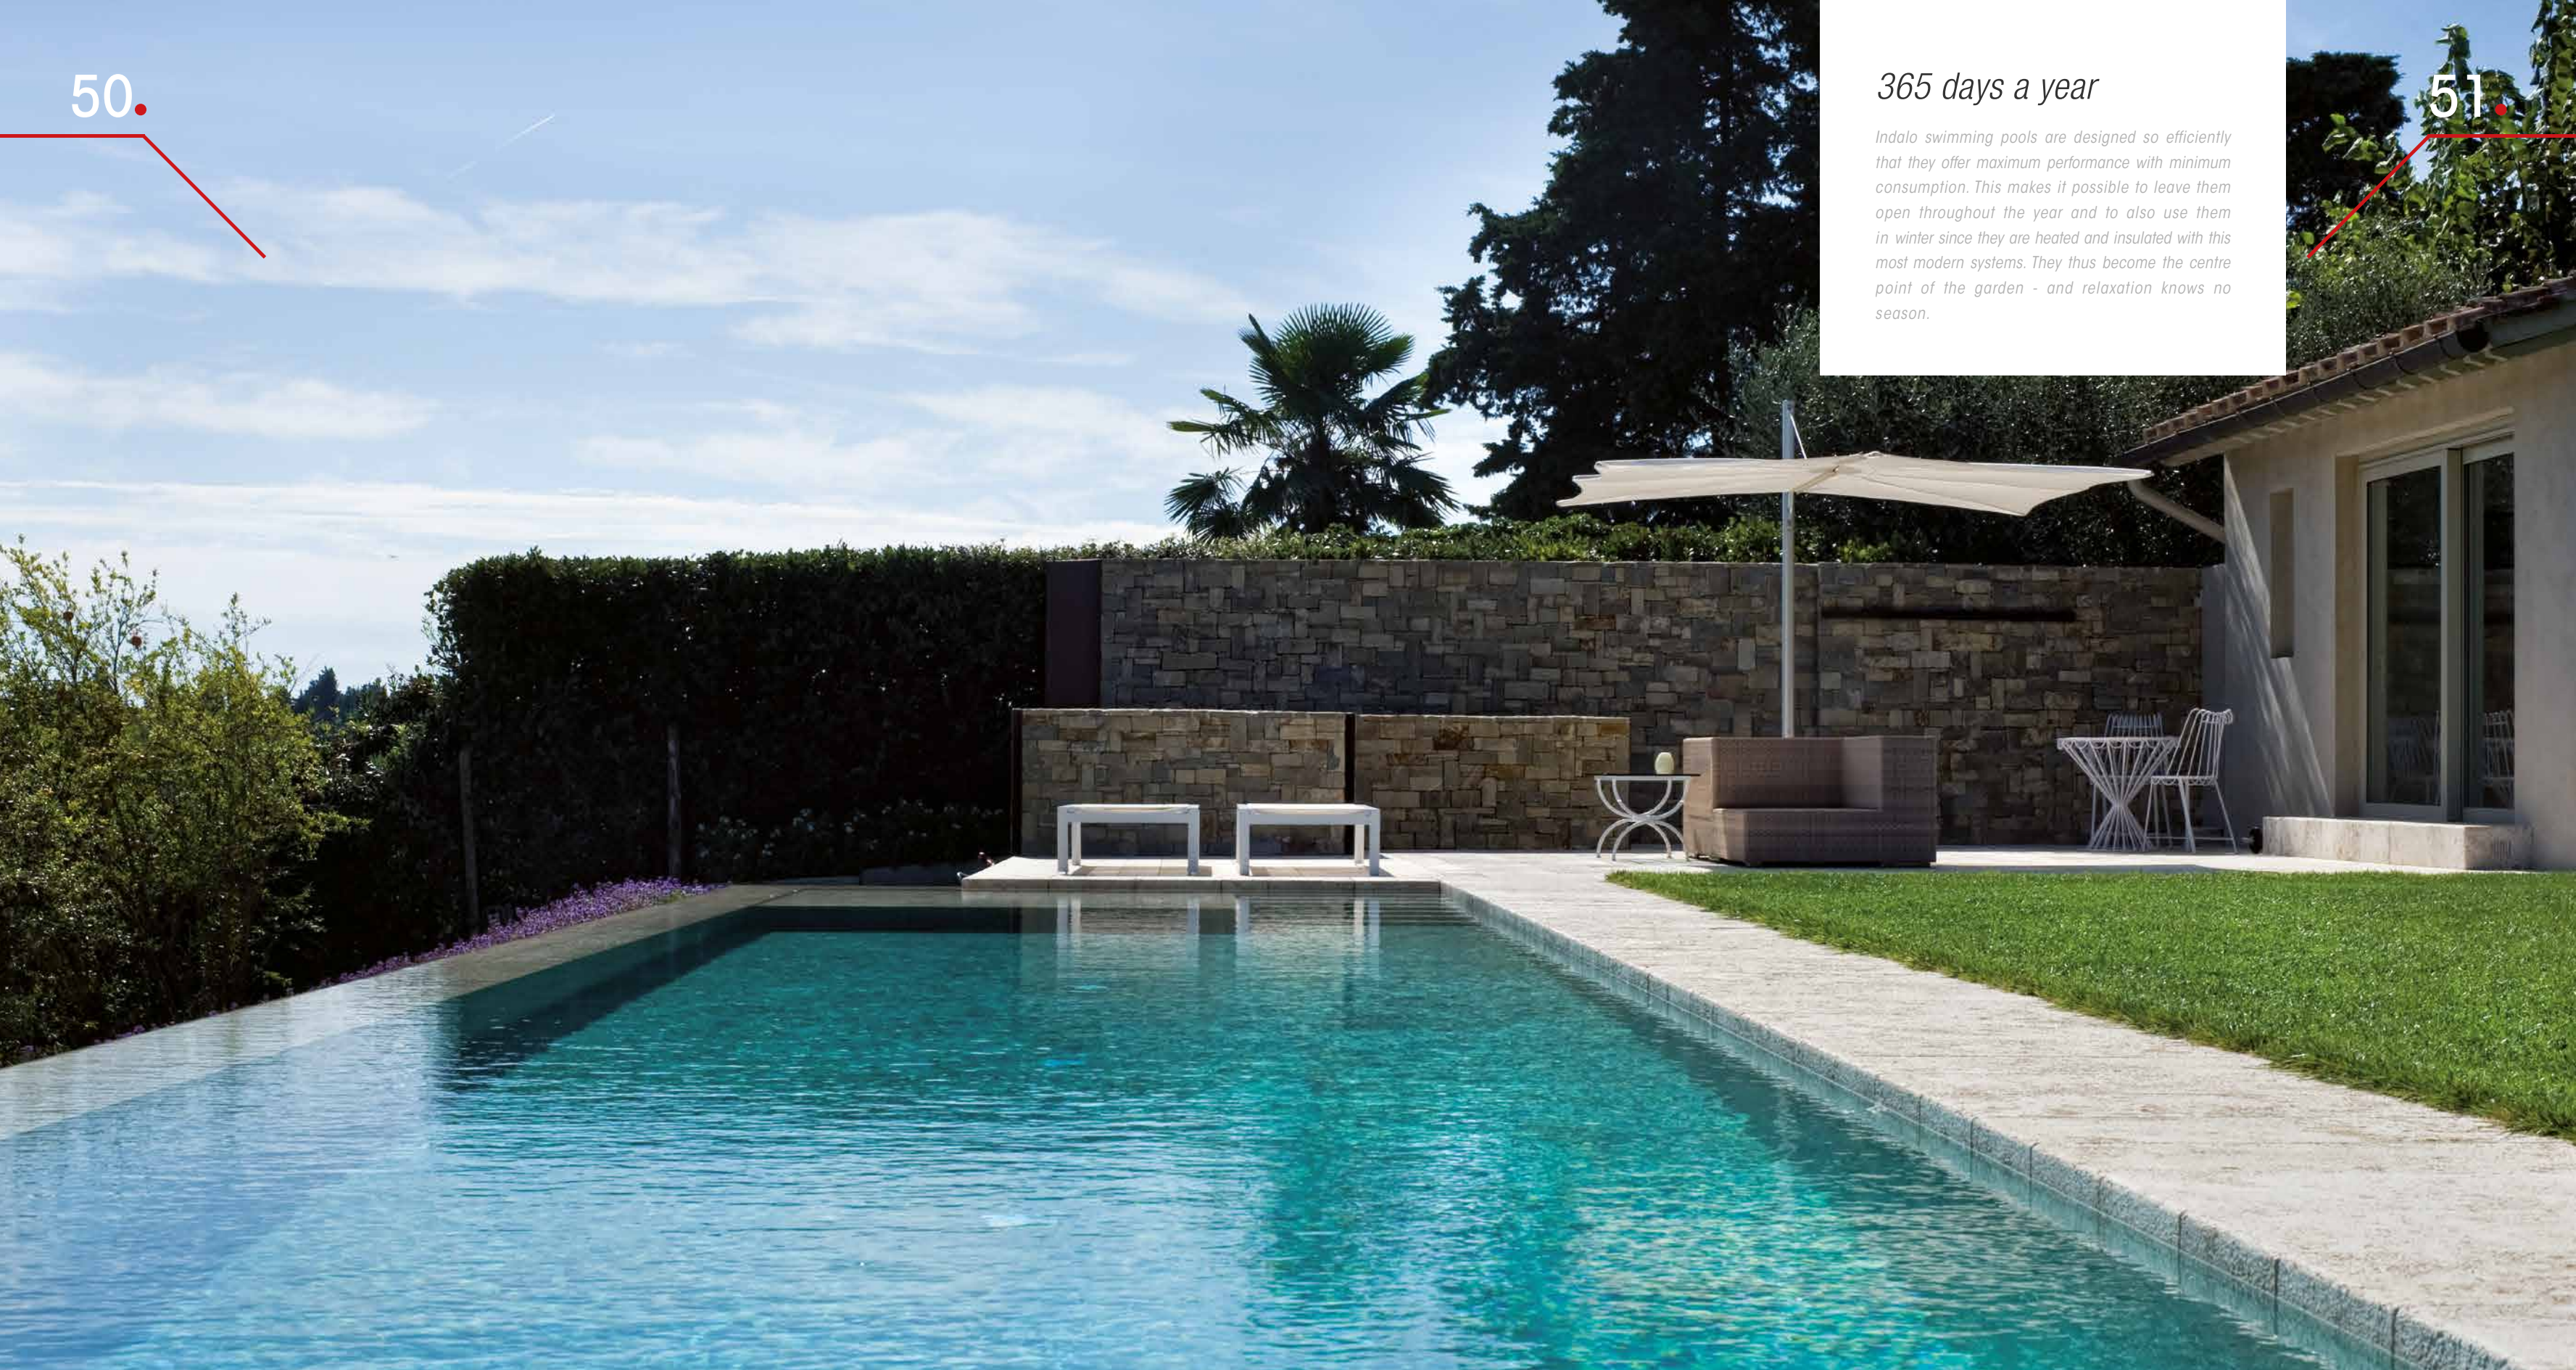

### *The best materials*

*The core operation of the swimming pool is the pump. For this reason, we always and exclusively use highly energy efficient, silent products that are able to adapt to any type of sanitisation.*

50.

365 days a year

*Indalo swimming pools are designed so efficiently that they offer maximum performance with minimum consumption. This makes it possible to leave them open throughout the year and to also use them in winter since they are heated and insulated with this most modern systems. They thus become the centre point of the garden - and relaxation knows no season.*

51.

52.

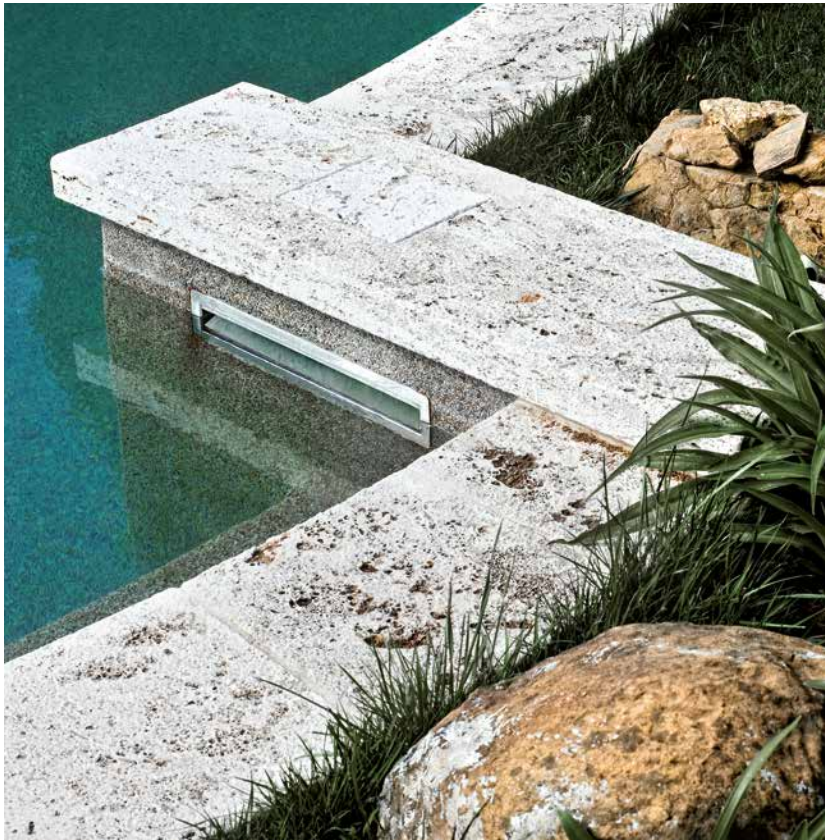

## Design solutions

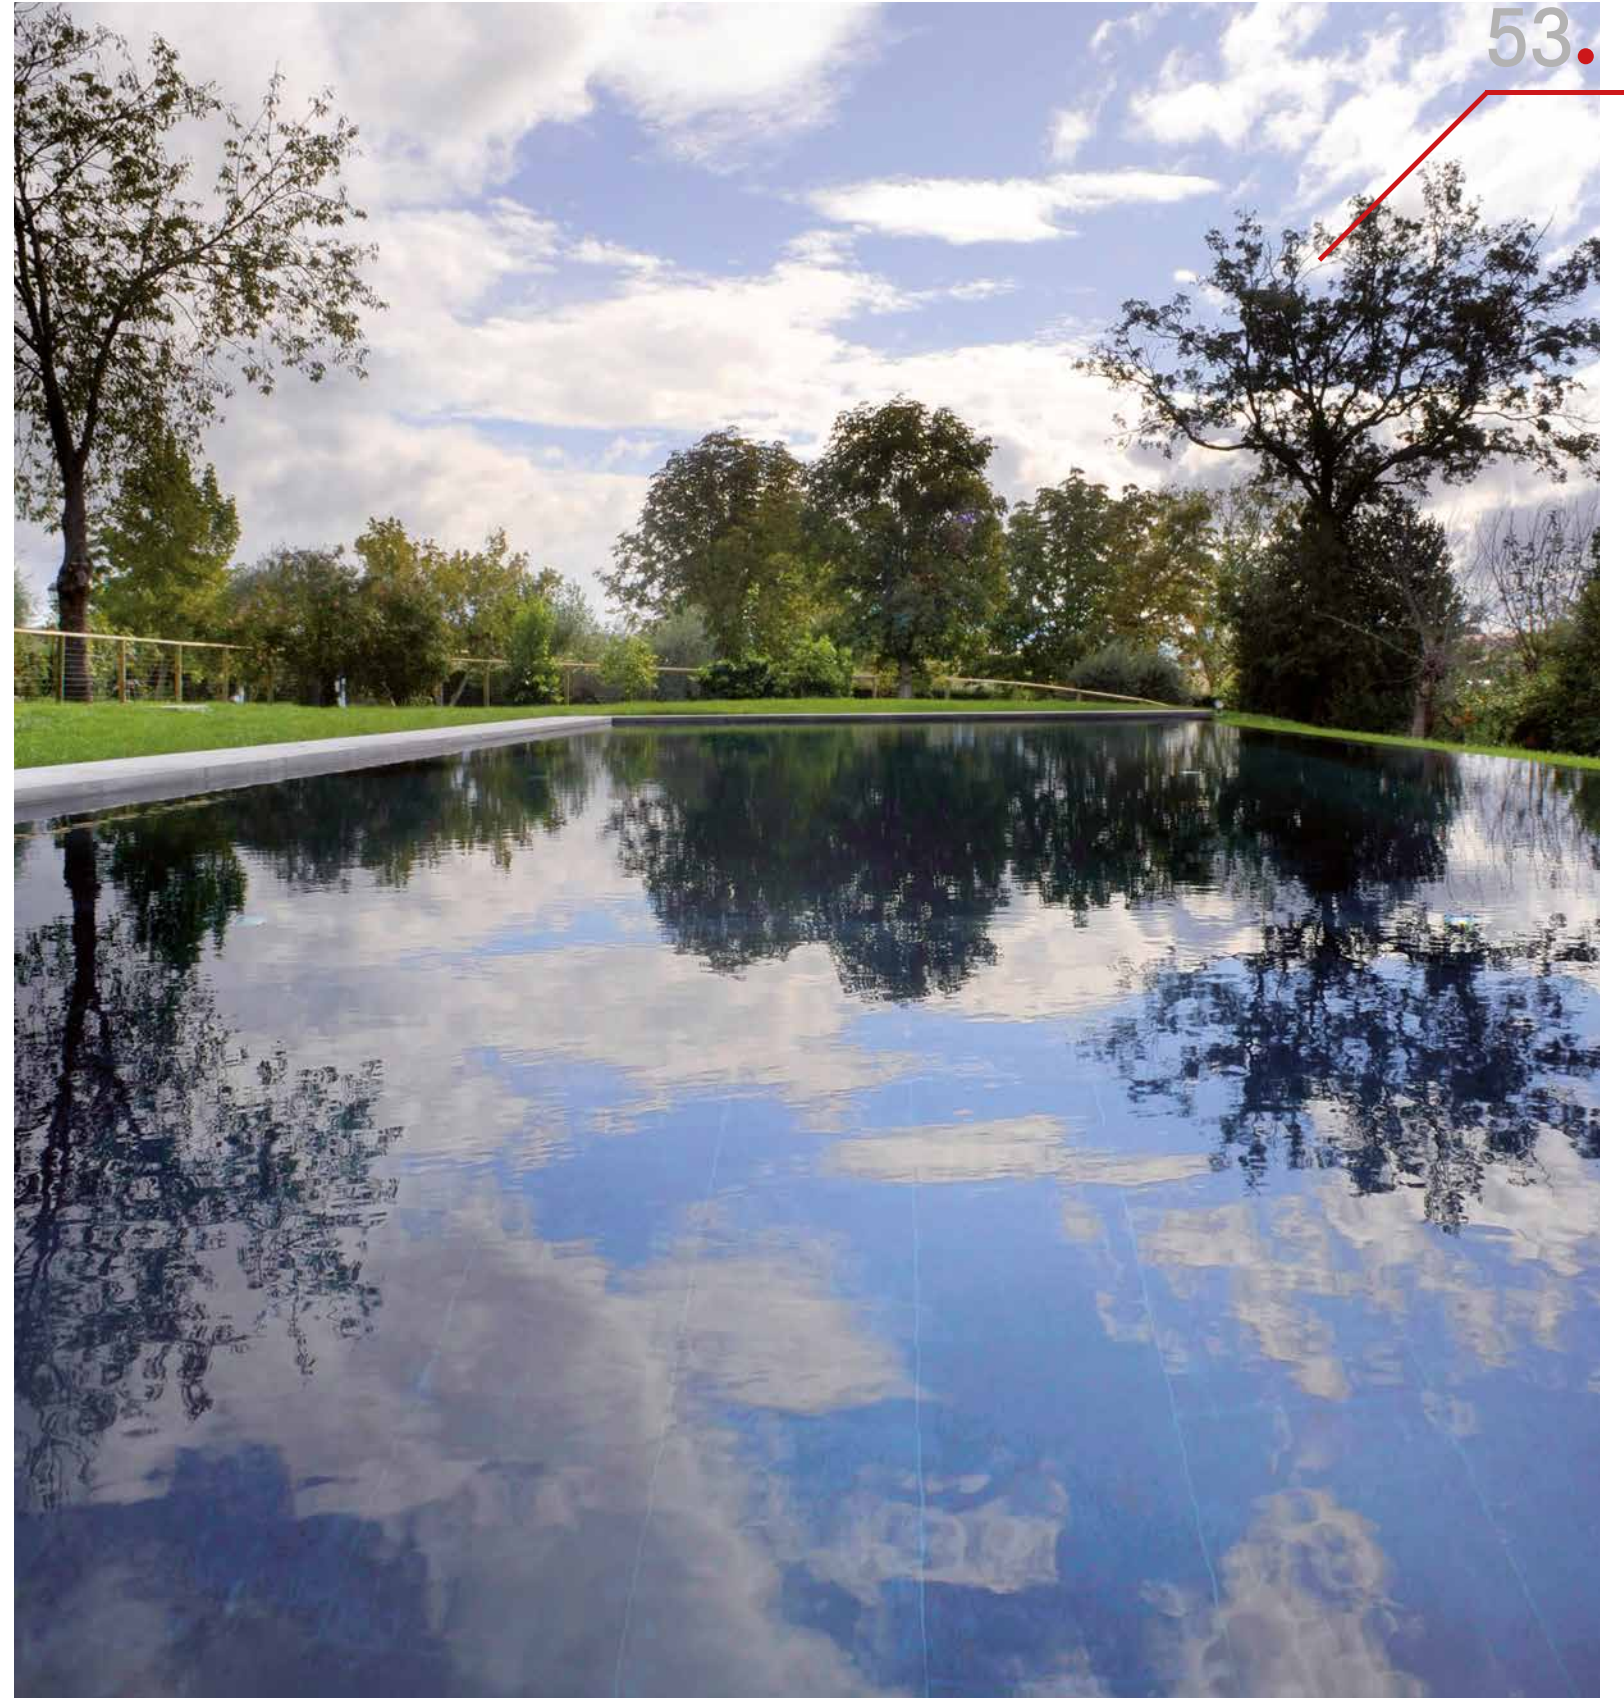

*Even the most simple of accessories, such as a stainless steel skimmer, can become elegant, minimal line objects of design - and even more effective since they are handmade upon order.*

## Certified products

*All the parts used by Indalo, even the piping, are products guaranteed to last over time, anti-corrosion, certified and approved by the best quality brands like DVGW, FDA, NSF, DIBIT and RINA.*

53.

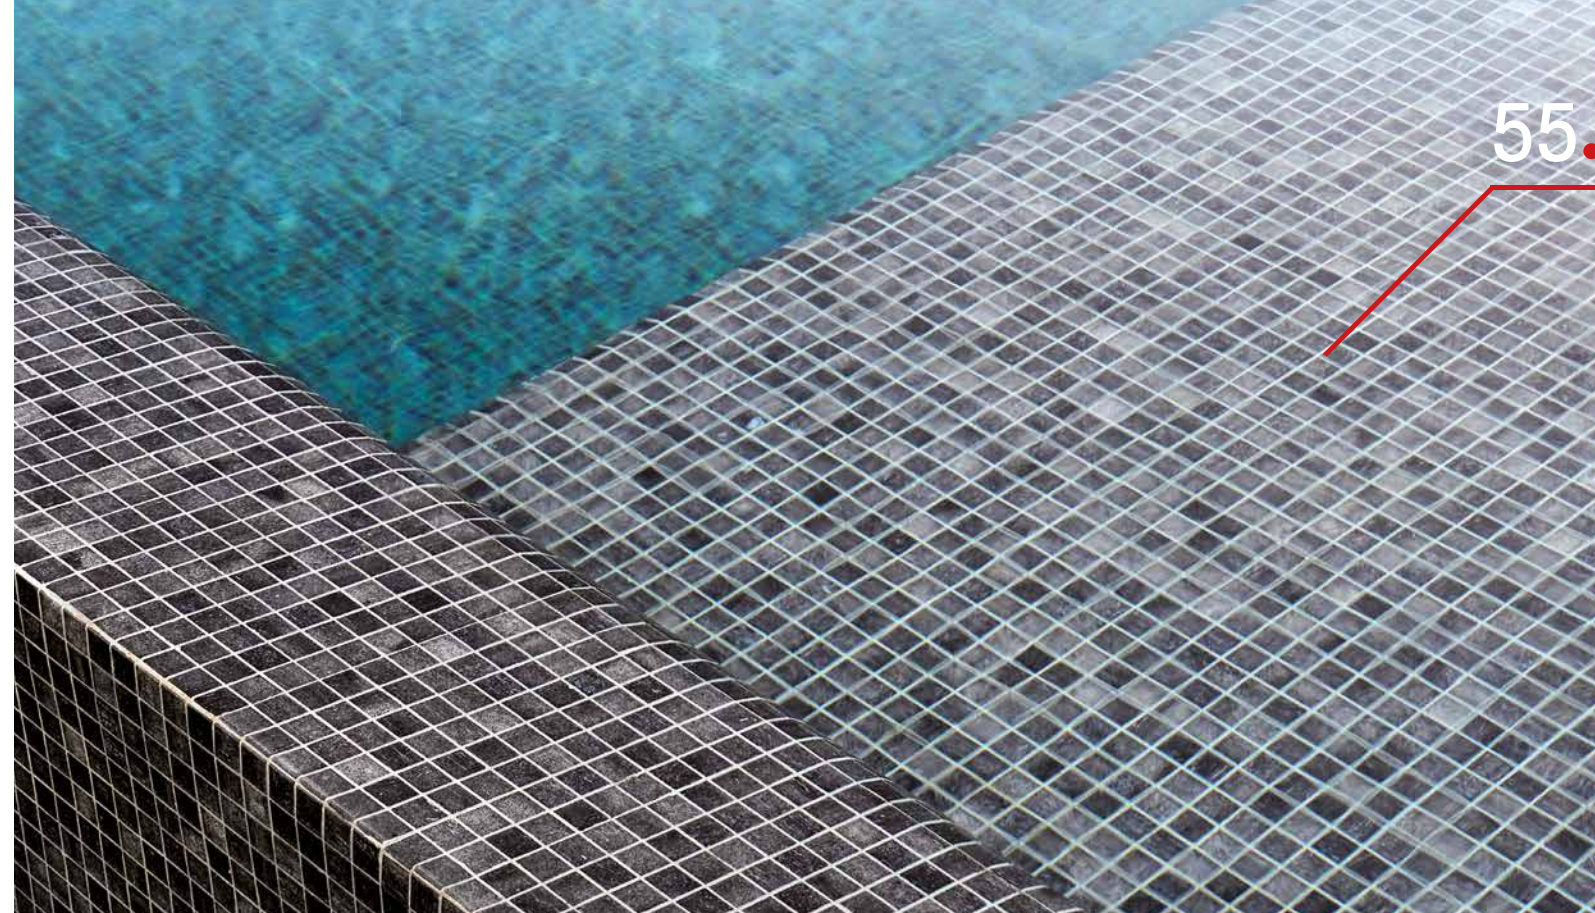

54.

55.

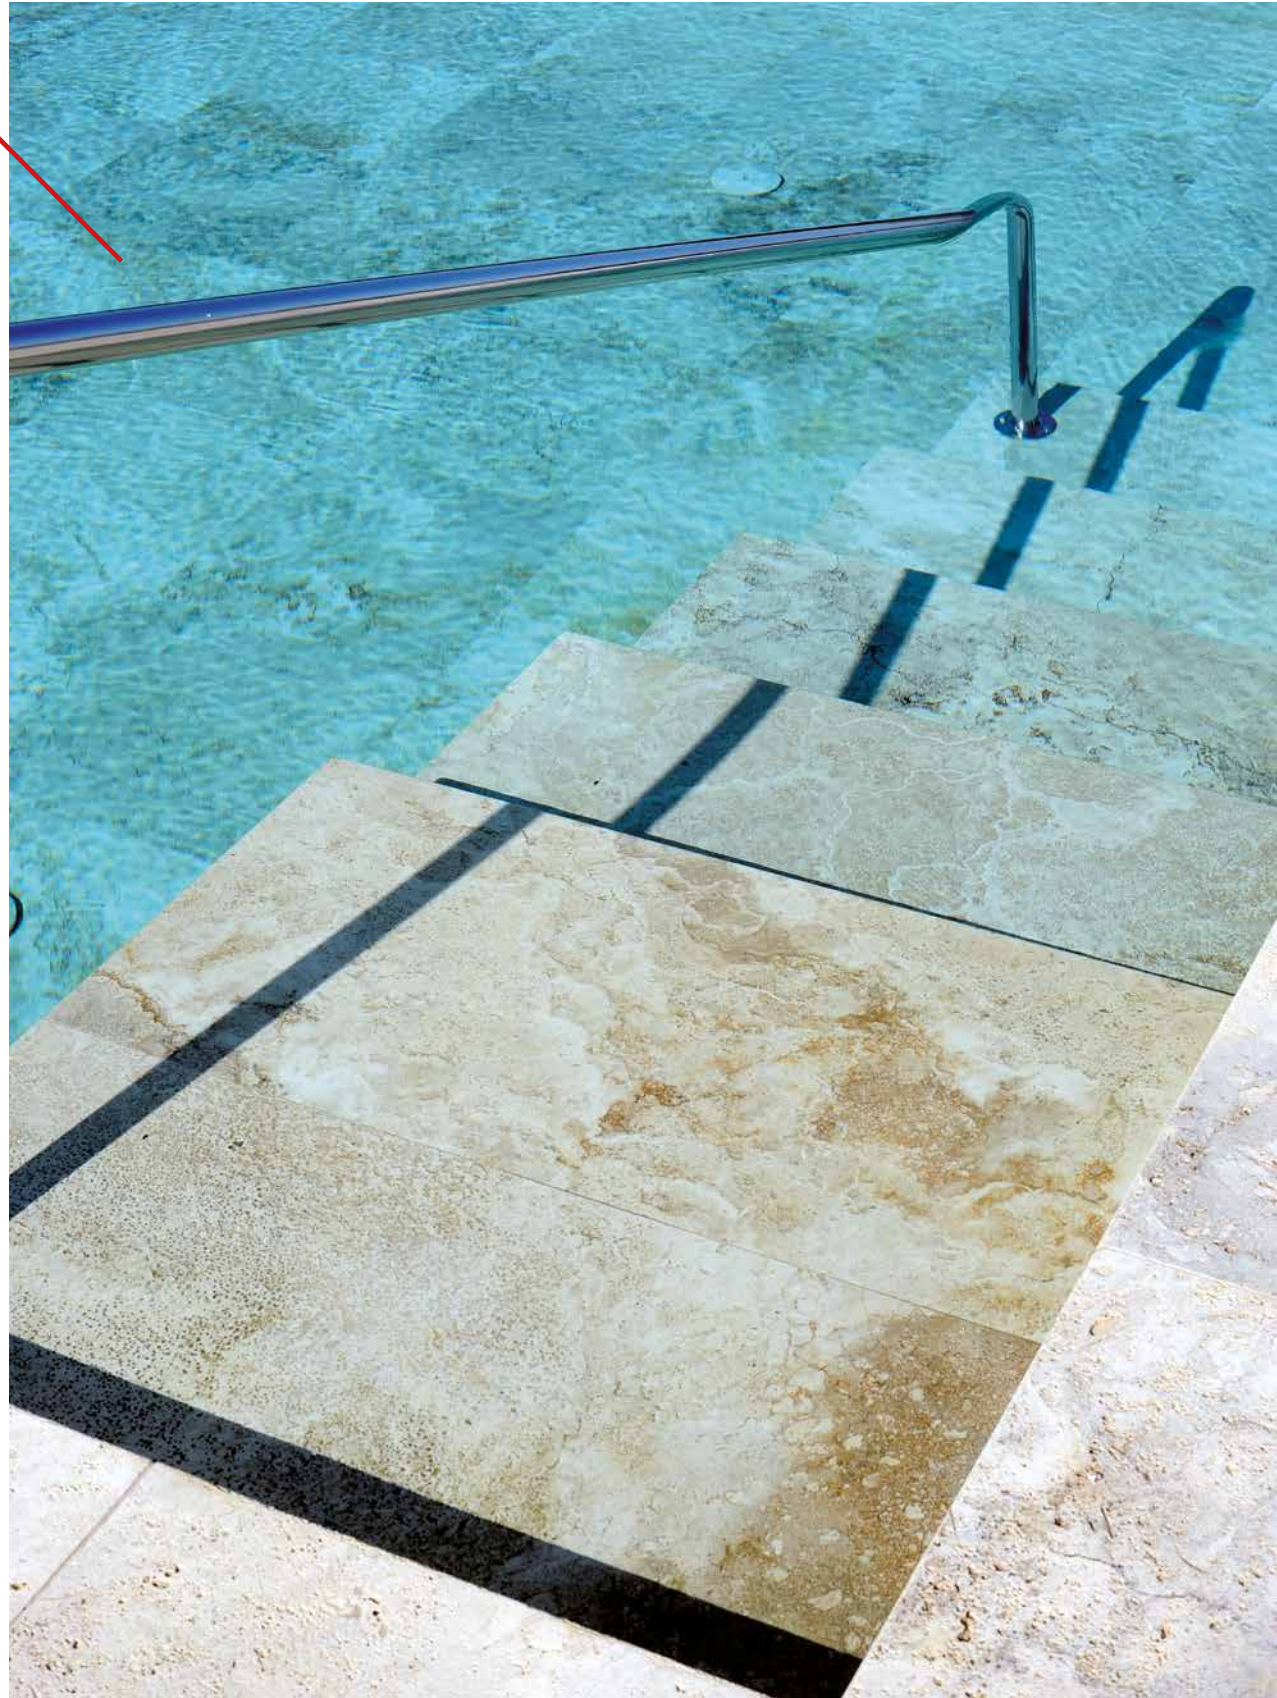

56.

57.

58.

59.

60.

61.

### *Shape and substance*

*The shape of a swimming pool is the expression of a need or a desire. When the customer's priority is to swim, a linear design is the winning formula.*
